

GOVERNMENT COLLEGE OF ENGINEERING

(An Autonomous Institution Affiliated to Anna University)

BARGUR - 635 104

Curriculum for MECHANICAL ENGINEERING

(Full Time)

I TO VIII SEMESTERS

2018

Regulations

For the students admitted during

AY 2018-2019

Revised on 06/03/2020

**OFFICE OF CONTROLLER OF EXAMINATIONS
GOVERNMENT COLLEGE OF ENGINEERING**

BARGUR - 635 104

Website: www.gcebargur.ac.in

PROGRAM SPECIFIC OUTCOMES (PSOs):	
1	Acquire basic knowledge and expertise necessary for professional practice in Mechanical Engineering for higher studies and research.
2	Attain and practice technical skills to identify, analyze, innovate and interact with industry to solve complex problems related to Mechanical Engineering.
3	Possess a professional attitude as an individual or a team member with consideration for society, professional ethics, environmental factors and motivation for lifelong learning.
PROGRAM OUTCOMES (POs)	
1	Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2	Problem Analysis: Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3	Design/development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4	Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5	Modern Tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
6	The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
8	Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
9	Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11	Project Management and Finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12	Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

MECHANICAL ENGINEERING (UG) CURRICULUM DESIGN

CREDIT SUMMARY

Name of the UG Programme: **B.E - MECHANICAL ENGINEERING**

S. No	Sub. Area	Credits per Semester								Credits Total	% of Total Credits	Total no. of Courses	Suggested Breakup of Credits (Total 160)*
		I	II	III	IV	V	VI	VII	VIII				
1	HSMC		3		3		1.5			7.5	5	3	12
2	BSC	9.5	9.5	4						23	14	7	25
3	ESC	8	8	7						23	14	8	24

FIFTH SEMESTER

Sl. No	COURSE CODE	COURSE TITLE	CAT	CONTACT PERIODS	L	T	P	C
THEORY								
1	18MPC501	Design of Machine Elements	PCC	4	3	1	0	4
2	18MPC502	Heat and Mass Transfer	PCC	4	3	1	0	4
3	18MPC503	Manufacturing Technology II	PCC	3	3	0	0	3
4	18MPC504	Metrology and Measurements	PCC	3	3	0	0	3
5	----	Professional Elective I	PEC	3	3	0	0	3
PRACTICAL								
6	18MPC506	Manufacturing Processes and Metrology Laboratory	PCC	4	0	0	4	2
7	18MPC507	Heat and Mass Transfer Laboratory	PCC	3	0	0	3	1.5
8	18MPR508	Project I	PROJ	3	0	0	3	1.5
		TOTAL		26	15	2	9	22

SIXTH SEMESTER

Sl. No	COURSE CODE	COURSE TITLE	CAT	CONTACT PERIODS	L	T	P	C
THEORY								
1	18MPC601	Dynamics of Machinery	PCC	4	3	1	0	4
2	18MPC602	Finite Element Analysis	PCC	4	3	1	0	4
3	18MPC603	Additive Manufacturing	PEC	3	3	0	0	3
4	--	Professional Elective II	PEC	3	3	0	0	3
5	--	Open Elective I	OEC	3	3	0	0	3
PRACTICAL								
6	18MPC606	Simulation Laboratory	PCC	3	0	0	3	1.5
7	18MPC607	Dynamics of Machinery Laboratory	PCC	3	0	0	3	1.5
8	18HSC608	Soft skills and Personality Development Laboratory	HSC	3	0	0	3	1.5
		TOTAL		26	15	2	9	21.5

SEVENTH SEMESTER

Sl. No	COURSE CODE	COURSE TITLE	CAT	CONTACT PERIODS	L	T	P	C
THEORY								
1	18MPC701	Automation in Manufacturing	PCC	3	3	0	0	3
2	18MPC702	Design of Transmission systems	PCC	3	3	0	0	3
3	-	Professional Elective III	PEC	3	3	0	0	3
4	-	Professional Elective IV	PEC	3	3	0	0	3
5	-	Open Elective II	OEC	3	3	0	0	3
PRACTICAL								
6	18MPC706	CAD/CAM and Mechatronics Laboratory	PCC	4	0	0	4	2
7	18MPR707	Project II	PROJ	6	0	0	6	3
		TOTAL		24	15	0	9	20

EIGHTH SEMESTER

Sl. No	Course Code	COURSE TITLE	CAT	CONTACT PERIODS	L	T	P	C
THEORY								
1	-	Professional Elective V	PEC	3	3	0	0	3
2	-	Professional Elective VI	PEC	3	3	0	0	3
3	-	Open Elective III	OEC	3	3	0	0	3
PRACTICAL								
5	18MPR804	Project III	PROJ	12	0	0	12	6
		TOTAL		21	9		12	15

TOTAL NO. OF CREDITS: 161

Value Added Courses

The students can undergo **Internship** in Government / Government Recognized industries / Organizations, for the period of 4 to 6 weeks.

This will be indicated in the **Grade Sheet** under the head, "Value Added Courses".

**OPEN ELECTIVES
(ONLY OFFERED TO THE OTHER DEPARTMENT STUDENTS)**

Sl.No	Subject Code	Course Title	CAT	L	T	P	C
1	18MOE001	Engineering Economics	OEC	3	0	0	3
2	18MOE002	Industrial Engineering	OEC	3	0	0	3
3	18MOE003	Entrepreneurship Development	OEC	3	0	0	3
4	18MOE004	Elements of Project Management	OEC	3	0	0	3
5	18MOE005	Non Destructive Testing	OEC	3	0	0	3
6	18MOE006	Introduction to Automobile Engineering	OEC	3	0	0	3
7	18MOE007	Industrial Automation	OEC	3	0	0	3
8	18MOE008	Introduction to Composite Materials.	OEC	3	0	0	3
9	18MOE009	Industrial Refrigeration and Air-Conditioning	OEC	3	0	0	3

**OPEN ELECTIVES
(OFFERED BY ECE)**

Sl.No	Subject Code	Course Title	CAT	L	T	P	C
1	18LOE001	Real Time Systems	OEC	3	0	0	3
2	18LOE002	Wireless sensor Networks	OEC	3	0	0	3
3	18LOE003	Industrial automation and Robotics	OEC	3	0	0	3
4	18LOE004	Principles of VLSI design	OEC	3	0	0	3
5	18LOE005	Applied Electronics	OEC	3	0	0	3
6	18LOE006	Wireless networking	OEC	3	0	0	3
7	18LOE007	Internet of Things	OEC	3	0	0	3
8	18LOE008	Soft Computing	OEC	3	0	0	3

**OPEN ELECTIVES
(OFFERED BY EEE)**

Sl.No	Subject Code	Course Title	CAT	L	T	P	C
1	18EOE001	Matlab Programing	OEC	3	0	0	3
2	18EOE002	Renewable Energy Sources	OEC	3	0	0	3
3	18EOE003	Energy Management and Auditing	OEC	3	0	0	3
4	18EOE004	Reliability Engineering	OEC	3	0	0	3
5	18EOE005	Disaster Management and Mitigation	OEC	3	0	0	3
6	18EOE006	Power Electronics and Drives	OEC	3	0	0	3

**OPEN ELECTIVES
(OFFERED BY CSE)**

Sl.No	Subject Code	Course Title	CAT	L	T	P	C
1	18SOE001	Programing in C++	OEC	3	0	0	3
2	18SOE002	Java Programing	OEC	3	0	0	3
3	18SOE003	Data base Concepts	OEC	3	0	0	3
4	18SOE004	Web Designing	OEC	3	0	0	3
5	18SOE005	Android Application Development	OEC	3	0	0	3
6	18SOE006	Computer Architecture	OEC	3	0	0	3
7	18SOE007	Fundamentals of Computer Network	OEC	3	0	0	3
8	18SOE008	Linux and RTOS	OEC	3	0	0	3
9	18SOE009	Introduction to Python	OEC	3	0	0	3
10	18SOE010	Introduction to Data Analytics	OEC	3	0	0	3

EVALUATION SCHEME :: 2018 REGULATIONS

Each course shall be evaluated for a maximum of **100 marks** as shown below:

Sl. No	Category of course	Continuous Assessment	End-Semester Examinations
1.	Theory Courses	50 Marks	50 Marks
2.	Laboratory Courses	50 Marks	50 Marks
3.	Project Work	50 Marks	50 Marks
4.	All other EEC Courses (non theory)	100 Marks	-
5.	Mandatory Courses	---	100 Marks (Internal Evaluation)

Continuous Assessment Mark the following guidelines are to be followed.

Sl. No.	Category Details	CA Marks	Weightage
1.	Test (3 Nos.) {each test is to be conducted for 50 Marks}	30 Marks	60%
2.	Assignment (3 Nos.)	20 Marks	40%
	TOTAL	50 Marks	100%

Marks for **Mini Project & Project Work** and the **Viva-Voce Examination** will be distributed as indicated below:

Continuous Assessment: 50 Marks				End Semester Examination: 50 Marks		
Review I (25 Marks)		Review II (25 Marks)		Report Evaluation (20 Marks)	Viva-Voce (30 Marks)	
Review Committee (Excluding Guide)	Guide	Review Committee (Excluding Guide)	Guide	External Examiner	External Examiner	Internal Examiner **
15	10	15	10	20	15	15

**Guide will be the internal

ATTENDANCE

A student has to **secure minimum of 75% attendance** for appearing end semester examination. If a student secures **65% to 75% attendance** in the Current Semester due to medical reasons (hospitalization / accident / specific illness) or due to participation in the College / University / State / National / International Level Sports events with prior permission from the Head of the Department concerned, the student shall apply for **condonation**. Condonation can be allowed only two semesters during the entire course of study (i.e **Only two condonations during the entire course of study**).

Students who secure **less than 65% attendance** will **not be permitted to write the End-Semester Examination**.

SPECIAL NOTE: All the students should **undergo Internship** (4 to 6 weeks duration) as a value added course. This will be indicated in the Grade Sheet under the head, "**Value Added Courses**".

18EMS101	ENGINEERING PHYSICS	L	T	P	C
Common to MECH, EEE, ECE & CSE		3	1	0	4
OBJECTIVES:					
•	To develop knowledge on properties of solids				
•	To understand the properties of conducting and semiconducting materials				
•	To become proficient in magnetic and dielectric materials				
•	To apply principles of quantum physics in the engineering field				
•	To know about the fundamentals of LASER and fibre optics and its applications				
UNIT I	PROPERTIES OF MATTER	9+3			
Elasticity – Hooke’s law – Stress – Types of Stresses – Strain- Types of Strain - Young’s Modulus – Rigidity Modulus – Bulk Modulus –Poisson’s ratio – Relationship between three elastic constants and Poisson’s ratio – Torsional Pendulum – Factors affecting elasticity of materials - Bending moment of a Beam – Depression of cantilever (Theory and Experiment) – Determination of Young’s modulus – Uniform and non-uniform bending (Theory and Experiment).					
UNIT II	CONDUCTING AND SEMICONDUCTING MATERIALS	9+3			
Conductors – Ohm’s Law – Electrical conductivity – Relation between current density, drift velocity and mobility – Classical free electron theory of metals – Expression for electrical conductivity of a metal –Expression for thermal conductivity of a metal – Wiedemann – Franz law – Fermi distribution function – Effect of temperature on Fermi Function – Density of energy states. Intrinsic semiconductor – Energy band diagram – Direct and indirect semiconductors – Carrier concentration in an intrinsic semiconductor (derivation) – Extrinsic semiconductors – n-type & p-type semiconductors (Qualitative) – Determination of Bandgap of semiconductors (Experiment)					
UNIT III	MAGNETIC AND DIELECTRIC MATERIALS	9+3			
Magnetism in materials – magnetic field and induction – magnetization – magnetic permeability and susceptibility – types of magnetic materials –microscopic classification of magnetic materials –Domain theory of ferromagnetism. Dielectric materials: Polarization processes – dielectric loss – internal field – Clausius-Mosotti relation – dielectric breakdown – high-k dielectrics.					
UNIT IV	QUANTUM PHYSICS	9+3			
Blackbody radiation – Wien’s displacement law – Rayleigh-Jean’s law - Planck’s theory (derivation) – Deduction of Wien’s displacement law and Rayleigh-Jean’s law – Matter waves – De-Broglie’s Hypothesis – Properties of matter waves - Wave-particle duality – Wave function and its physical Significance – Schrodinger wave equation – Time-dependent and time-independent – Application of Schrodinger wave equation: Particle in a 1 D box.					
UNIT V	LASER PHOTONICS AND FIBRE OPTICS	9+3			
LASER – Interaction of light radiation with materials – Einstein’s A and B coefficient derivation – Concept of LASER – Population inversion – Pumping action – Methods for pumping action – Characteristics of LASER – Principle, construction and working of Nd-YAG – Industrial and					

medical applications of lasers.
 Structure of Optical Fibre – Guiding mechanism – Total internal reflection – Critical Angle – Conditions for total internal reflection – Principle and Propagation of light in Optical Fibres – Numerical aperture and acceptance angle – Types of optical fibres (Material, refractive index and mode) – their characteristics and applications.

TOTAL: 60 PERIODS

OUTCOMES:

1.	To learn about three types of elastic moduli and able to calculate them for different materials
2.	To learn about conducting and semiconducting materials and able to derive different parameters relevant to them
3.	To learn about types of magnetic materials and their types and functional knowledge of dielectric materials
4.	To understand the quantum nature of materials and apply fundamental principles of quantum physics to the engineering field
5.	To understand the working principles of lasers and their types and also to know about fibre optics and mechanism of propagation of light through them.

18ZBS102	ENGINEERING MATHEMATICS- I	L	T	P	C
		3	1	0	4
OBJECTIVES					
•	Matrix algebra and techniques and using them in engineering applications.				
•	The concept of infinite series and their convergence so that they will be familiar with limitations of using infinite series approximations for solutions arising in mathematical modelling.				
•	Differential and integral calculus and their applications in various engineering applications.				
UNIT I	MATRICES				9+3
Eigenvalues and Eigenvectors of a real matrix – Characteristic equation – Properties of eigenvalues and eigenvectors – Statement and applications of Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of a quadratic form to canonical form by orthogonal transformation – Nature of quadratic forms.					
UNIT II	SEQUENCES AND SERIES				9+3
Sequences: Definition and examples – Series: Types and Convergence – Series of positive terms – Tests of convergence: Comparison test, Integral test and D,,Alembert,,s ratio test – Alternating series – Leibnitz,,s test – Series of positive and negative terms – Absolute and conditional convergence.					
UNIT III	APPLICATIONS OF DIFFERENTIAL CALCULUS				9+3
Curvature in Cartesian co-ordinates – Centre and radius of curvature – Circle of curvature – Evolutes – Envelopes - Evolute as envelope of normals.					
UNIT IV	FUNCTIONS OF SEVERAL VARIABLES				9+3
Limits and Continuity – Partial derivatives – Total derivative – Differentiation of implicit functions – Jacobian and properties – Taylors series for functions of two variables – Maxima and minima of functions of two variables – Lagranges method of undetermined multipliers.					
UNIT V	MULTIPLE INTEGRALS				9+3
Double integrals in cartesian and polar coordinates – Change of order of integration – Area enclosed by plane curves – Change of variables in double integrals – Area of a curved surface - Triple integrals – Volume of Solids.					
LECTURE: 45 TUTORIAL: 15 TOTAL : 60 PERIODS					
OUTCOMES:	On completion of this course, students will be able to				
1.	solve problems on matrices and to apply concepts of matrix theory whenever applicable in the field of engineering.				
2.	solve problems using convergence tests on sequences and series and to apply them in engineering field appropriately.				
3.	solve problems on differential and integral calculus and will be exposed to their applications in engineering

18ZES103	BASIC ELECTRICAL ENGINEERING	L	T	P	C
(Common to Mech & CSE)		2	1	0	3
OBJECTIVES:					
•	To introduce electric circuits and theorems.				
•	To understand the basics of AC circuits				
•	To study the Basics of Transformer				
•	To understand the concept of electrical machines				
•	To study about the electrical installations				
UNIT I	DC CIRCUITS				9
Electrical circuit elements (R, L and C), voltage and current sources, Kirchhoff's current and voltage laws, analysis of simple circuits with DC excitation, star delta transformation. Superposition, Thevenin and Norton Theorems. Time-domain analysis of first-order RL and RC circuits.					
UNIT II	AC CIRCUITS				9
Representation of sinusoidal waveforms, peak and RMS values, phasor representation, real power, reactive power, apparent power, power factor. Time domain Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three-phase balanced circuits, voltage and current relations in star and delta connections.					
UNIT III	TRANSFORMERS				9
Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Auto-transformer and three-phase transformer connections.					
UNIT IV	ELECTRICAL MACHINES				9
Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. Single-phase induction motor. Construction, working, torque-speed characteristic and speed control of dc motor. Construction and working of synchronous generators[Elementary Analysis only]					
UNIT V	POWER CONVERTERS AND ELECTRICAL INSTALLATIONS				9
DC-DC buck and boost converters, duty ratio control. Single-phase and three-phase voltage source inverters; sinusoidal modulation. Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery Backup.					
TOTAL : 45 PERIODS					
OUTCOMES:		At the end of this course, students will able to			
1.	Understand and analyze basic Electric and magnetic circuits.				
2.	Study the working principles of Electrical Machines.				
3.	Understand the Power Converters and the components of low-voltage electrical installations.

18ZES104	ENGINEERING GRAPHICS AND DESIGN	L	T	P	C
(Common to MECH, EEE, ECE & CSE)		1	0	4	3
COURSE OBJECTIVES:					
•	This course aims to introduce the concept of graphic communication, develop the drawing skills for communicating concepts, ideas and designs of engineering products and to expose them to existing national standards related to technical drawings				
•	To draw the projection of simple solids like prisms, pyramids, cylinder etc.				
•	To draw the development of surfaces to estimate the sheet metal requirement and to prepare sectional views of solids.				
•	To develop skills in three-dimensional visualization of engineering components and to draw isometric views of simple solids.				
CONCEPTS AND CONVENTIONS (Not for Examination)					
Importance of graphics in engineering applications – use of drafting instruments – BIS / ISO conventions and specifications – size, layout and folding of drawing sheets – lettering and dimensioning.					
UNIT I	PLANE CURVES AND FREE-HAND SKETCHING				6+9
Basic geometrical constructions, curves used in engineering. Conics – construction of ellipse, parabola and hyperbola by eccentricity method – drawing of tangents and normal to the above curves. Visualization concepts and free hand sketching: visualization principles –representation of three dimensional objects – layout of views- freehand sketching of multiple views from pictorial views of objects.					
UNIT II	PROJECTION OF POINTS, LINES AND PLANE SURFACES				6+9
Orthographic projection – Principles-principal planes - First angle projection - Projection of points - Projection of straight lines inclined to both the principal planes - determination of true lengths and true inclinations by rotating line method - traces. Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.					
UNIT III	PROJECTION OF SOLIDS				6+9
Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids, when the axis is inclined to both the principal planes by rotating object method.					
UNIT IV	PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OF SURFACES				6+9
Sectioning of prisms, pyramids, cylinders and cones in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids – prisms, pyramids cylinders and cones.					
UNIT V	ISOMETRIC PROJECTION AND OVERVIEW OF COMPUTER GRAPHICS				6+9
Principles of isometric projection – isometric scale –isometric projections of simple solids and truncated solids - prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions – Introduction to CAD - The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom as used in CAD- (CAD – evaluation during CA only)					

Lecture: 15 Periods Tutorial: 0 Periods Practical: 60 Periods Total: 75 Periods	
OUTCOMES:	On completion of this course, students will be able to
1	Familiarize with the fundamentals, standards of Engineering graphics and Perform freehand sketching of multiple views of basic geometrical constructions.
2	Draw orthographic projections of points, lines and plane surfaces.
3	Draw projections of solids, sectioned solids and development of surfaces.
4	Visualize and draw isometric views of simple solids.
5	Appreciate the use of computers in drawing and modelling of simple objects.

18EMS106	PHYSICS LABORATORY											L	T	P	C
(Common to MECH, EEE, ECE & CSE)											0	0	3	1.5	
OBJECTIVES															
•	To introduce different experiments to test basic understanding of physics concepts applied in optics, thermal physics, properties of matter and liquids														
LIST OF EXPERIMENTS : PHYSICS LABORATORY (ANY 5 EXPERIMENTS)															
1.	Determination of rigidity modulus : Torsion Pendulum														
2.	Determination of Young's modulus by non-uniform bending method														
3.	(a) Determination of wave length and particle size using LASER (b) Determination of acceptance angle in an optical fibre														
4.	Determination of thermal conductivity of a bad conductor – Lee's Disc method														
5.	Determination of velocity of sound and compressibility of fluid – Ultrasonic interferometer														
6.	Determination of wavelength of mercury spectrum – Spectrometer grating														
7.	Determination of band gap of a semiconductor														
														Total: 45 Periods	
OUTCOMES:		On completion of this course, students will be able to													
1.	After the course, the student will be able to apply principles of elasticity, optical and thermal properties for engineering applications.

18ZES107	BASIC ELECTRICAL ENGINEERING LABORATORY	L	T	P	C
(Common to MECH & CSE)		0	0	4	2
OBJECTIVES:					
●	To introduce basic electrical measuring Instruments.				
●	To obtain transient and steady state characteristics of electrical circuits.				
●	To obtain different electrical machines and transformer basic characteristics.				
●	To introduce basic power converters.				
LIST OF EXPERIMENTS :					
1.	(a) Study of Electrical basic safety precautions. (b) Measurement of voltage, current, Power in resistive loads.				
2.	(a) Measurement of waveforms parameters using CRO (b) Identification and calculation of resistors, inductors and Capacitors values.				
3.	a) Steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a Step input voltage using a storage oscilloscope. b) Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification. c) Observation of phase differences between current and voltage. d) Resonance in R-L-C circuits.				
4.	(a) Observation of the no-load current waveform Transformer on an oscilloscope. (b) Load Test on Single phase Transformer.				
5.	Measurement of three phase power in a balanced three phase circuits.				
6.	Demonstration of cut-out sections of machines (a) DC machine (commutator-brush arrangement) (b) Induction machine (squirrel cage rotor) (c) synchronous machine (field winding – slip ring arrangement) (d) Single-phase induction machine.				
7.	Torque Speed Characteristics of DC Shunt motor.				
8.	(a) Synchronous speed of two and four-pole, three-phase induction motors. (b) Direction reversal by change of phase-sequence of connections. (c) Torque-Slip Characteristics of an induction motor. (d) Generator operation of an induction machine driven at super-synchronous speed.				

9.	Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor	
	(d) Components of LT switchgear.	
TOTAL PERIODS		45
OUTCOMES:	After the course, the student will be able to	
1.	Identify common electrical components and their ratings	
2.	Make electrical connections by wires of appropriate ratings.	
3.	Understand the usage of common electrical measuring instruments.	
4.	Understand the basic characteristics of transformers and electrical machines.	
5.	Understand the working of power electronic converters.

18MBS201	APPLIED CHEMISTRY	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To make students conversant with water parameters, boilers, need for water treatment and acquire basic knowledge in spectroscopy and its applications.				
•	Students ought to be aware of fundamental principles behind different electrochemical reactions, corrosion of materials, methods to prevent corrosion and industrial importance of alloys.				
•	To learn the chemistry behind polymers, synthesis, merits, demerits and its applications in various field.				
•	To acquire basic knowledge in non-conventional energy resources and the chemical reactions involved in cell, batteries and function of lubricants.				
•	To learn the chemistry behind fuels and combustion.				
UNIT I	WATER TECHNOLOGY AND ANALYTICAL TECHNIQUES	9+3			
<p>Water Technology: Characteristics – alkalinity and its significance – hardness (problems) - types and estimation by EDTA method – potable water treatment – boiler feed water - requirements – disadvantages of using hard water in boilers (Scales & Sludge, Boiler corrosion, Priming & Foaming, Caustic embrittlement) – water treatment – Internal treatment – external treatment – Demineralization process – desalination – reverse osmosis.</p> <p>Analytical Techniques: Electromagnetic spectrum – Beer-Lambert’s law - Fundamentals of spectroscopy – (Instrumentation) of UV-Visible, AAS, Flame photometry.</p>					
UNIT II	ELECTROCHEMISTRY, CORROSION AND ALLOYS	9+3			
<p>Electrochemistry: Electrochemical cells – reversible and irreversible cells – EMF – measurement of EMF – single electrode potential – Nernst equation (Problems) – reference electrode – standard hydrogen electrode and calomel electrode – electrochemical series and its applications.</p> <p>Corrosion: Corrosion – Pilling Bedworth rule - dry corrosion - electrochemical corrosion – types (galvanic, pitting, differential aeration) – factors influencing corrosion – corrosion control methods – sacrificial anode method – impressed current cathodic method – protective coatings – paints – constituents – functions – metallic coatings – electroplating (Cu) and electro less plating (Ni). Alloys – importance of alloys – heat treatment of alloys – Ferrous alloys (nichrome and stainless steel) – non-ferrous alloys (Brass and bronze).</p>					
UNIT III	POLYMERS AND COMPOSITES	9+3			
<p>Polymers: Definition – classification – functionality – polymerization – degree of polymerization – types (addition, condensation, copolymerization) – mechanism (free radical) – plastics – thermoplastics and thermosetting plastics – preparation, properties and uses of individual polymers (PVC, TEFLON, Nylon-6,6, Nylon-6, PET, epoxy resin) – rubber - vulcanization of rubber – applications - Advanced polymeric materials and electronic devices – conducting and semiconducting polymers – liquid crystal properties – definition: dendrimers and their difference from polymers.</p> <p>Composites: definition – types polymer matrix composites – Fibre Reinforced Polymers – applications – advanced composite materials – physical and chemical properties – applications.</p>					
UNIT IV	NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES - LUBRICANTS	9+3			
<p>Renewable and non renewable energy resources and their importance - Nuclear energy – fission fusion reactions – light water nuclear reactor for power generation – breeder reactor – solar energy conversion – solar cells – wind energy – batteries: alkaline batteries – lead–acid accumulator, Ni-Cd ,and Li-ion batteries – fuel cells – H₂-O₂ fuel cell - principles and applications – advantages and disadvantages.</p>					

Lubricants: Lubricants - mechanism of lubrication, classification and properties of lubricants (viscosity index, flash and fire points, cloud and pour points, oiliness), Additives for lubricants, synthetic lubricants, Greases – Preparation & properties (consistency, drop point) and uses.															
UNIT V		FUELS AND COMBUSTION										9+3			
Classification - Calorific value – coal – analysis of coal (Proximate and Ultimate) – metallurgical coke – manufacture by Otto-Hoffmann method – petroleum – manufacture of synthetic petrol (Bergius method) – Knocking – octane number – diesel oil – cetane number – natural gas – compressed natural gas (CNG) – Liquefied petroleum gas (LPG) – Producer gas – water gas. Power alcohol – biodiesel and its synthesis (transesterification) – chromatographic analysis of biodiesel.															
Combustion of fuels: theoretical calculation of calorific value – calculation of stoichiometry of fuel and air ratio – ignition temperature – explosive range – flue gas analysis (ORSAT apparatus)															
TOTAL (L= 45 ; T=15) : 60 PERIODS															
COURSE OUTCOMES															
On completion of the course the student will be able to,															
•		apply the knowledge of basic science in identifying, to formulate and to solve the engineering problems.													
•		analyze water borne problems faced in boilers, water treatment methods and analytical techniques and its applications.													
•		understand polymerization reactions and electrochemical reactions and its applications.													
•		Obtain knowledge in various renewable energy resources, Batteries, fuel cells, lubricants and its applications.													
•		acquire in-depth knowledge in fuels and combustion.

18ZBS202	ENGINEERING MATHEMATICS- II	L	T	P	C
(Common to MECH, EEE, ECE & CSE)		3	1	0	4
OBJECTIVES					
•	Vector calculus and their uses in various field theoretic subjects.				
•	Higher order and special type of linear differential equations and methods to find solutions.				
•	Laplace transforms and properties and their applications in engineering.				
•	Construction of analytic functions and concepts of concepts of conformal mapping, complex integration and series solutions.				
UNIT I	VECTOR CALCULUS	9+3			
Gradient, divergence and curl – Directional derivative – Irrotational and solenoidal vector fields – Vector integration – Green,,s theorem in a plane, Gauss divergence theorem and Stokes,, theorem (excluding proofs) – Simple applications involving cubes and rectangular parallelopeds.					
UNIT II	ORDINARY DIFFERENTIAL EQUATIONS	9+3			
Higher order linear differential equations with constant coefficients – Method of variation of parameters – Cauchy,,s and Legendre,,s linear equations – Simultaneous first order linear equations with constant coefficients.					
UNIT III	LAPLACE TRANSFORMS	9+3			
Laplace transform – Sufficient condition for existence – Transform of elementary functions – Basic properties – Transforms of derivatives and integrals of functions - Derivatives and integrals of transforms - Transforms of unit step function and impulse functions – Transform of periodic functions. Inverse Laplace transform -Statement of Convolution theorem – Initial and final value theorems – Solution of linear ODE of second order with constant coefficients using Laplace transformation techniques.					
UNIT IV	ANALYTIC FUNCTIONS	9+3			
Functions of a complex variable – Analytic functions: Necessary conditions – Cauchy-Riemann equations and sufficient conditions (excluding proofs) – Harmonic and orthogonal properties of analytic function – Harmonic conjugate – Construction of analytic functions – Conformal mapping: $w = z+k$, kz , $1/z$, z^2 , e^z and bilinear transformation.					
UNIT V	COMPLEX INTEGRATION	9+3			
Complex integration – Statement and applications of Cauchy,,s integral theorem and Cauchy,,s integral formula – Taylor,,s and Laurent,,s series expansions – Singular points – Residues – Cauchy,,s residue theorem – Evaluation of real definite integrals as contour integrals around unit circle and semi-circle (excluding poles on the real axis).					
LECTURE: 45 TUTORIAL: 15 TOTAL : 60 PERIODS					
OUTCOMES:	On completion of this course, students will be able to				
1.	Solve problems on vector calculus and to apply them in any other field theory related subjects.				
2.	Solve differential equations and will be exposed to their applications in various fields of engineering.				

3.	Solve problems on Laplace transforms and will be able to use Laplace transform in finding solutions of differential and integral equations and other engineering applications.
4.	Solve complex integration problems and will be exposed to various applications of analytic functions and conformal mapping in engineering.

18MES203	PROGRAMMING IN PYTHON	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To know the basics of algorithmic problem solving				
•	To read and write simple Python programs.				
•	To develop Python programs with conditionals and loops.				
•	To define Python functions and call them.				
•	To use Python data structures – lists, tuples, dictionaries.				
•	To do input/output with files in Python.				
UNIT I	ALGORITHMIC PROBLEM SOLVING	9			
Algorithms, building blocks of algorithms (statements, state, control flow, functions), notation (pseudo code, flow chart, programming language), algorithmic problem solving, simple strategies for developing algorithms (iteration, recursion). Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, and guess an integer number in a range, Towers of Hanoi.					
UNIT II	DATA, EXPRESSIONS, STATEMENTS	9			
Python interpreter and interactive mode; values and types: int, float, boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments; Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.					
UNIT III	CONTROL FLOW, FUNCTIONS	9			
Conditionals: Boolean values and operators, conditional (if), alternative (if-else), chained conditional (if-elif-else); Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays. Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, linear search, binary search.					
UNIT IV	LISTS, TUPLES, DICTIONARIES	9			
Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension; Illustrative programs: selection sort, insertion sort, mergesort, histogram.					
UNIT V	FILES, MODULES, PACKAGES	9			
Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages; Illustrative programs: word count, copy file.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Develop algorithmic solutions to simple computational problems.				
2.	Read, write, execute by hand simple Python programs.				
3.	Structure simple Python programs for solving problems and Read and write data from/to files in Python Programs.				
4.	Decompose a Python program into functions.				

5.	Represent compound data using Python lists, tuples, and dictionaries.
TEXT BOOKS:

18ZHS204	TECHNICAL ENGLISH	L	T	P	C
(Common to MECH, EEE, ECE & CSE)		2	0	0	2
OBJECTIVES:					
•	To be able to acquire vocabulary by way of reading skills.				
•	To be able to write iterative as well as recursive programs.				
•	To be able to represent data in arrays, strings and structures and manipulate them through a program.				
•	To be able to declare pointers of different types and use them in defining self- referential structures.				
•	To be able to create, read and write to and from simple text files.				
UNIT I	VOCABULARY BUILDING	6			
The concept of Word Formation - Root words from foreign languages and their use in English - Acquaintance with prefixes and suffixes from foreign languages in English to form derivatives. - Synonyms, antonyms, and standard abbreviations					
UNIT II	BASIC WRITING SKILLS	6			
Sentence Structures - Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence - Organizing principles of paragraphs in documents - Techniques for writing precisely					
UNIT III	IDENTIFYING COMMON ERRORS IN WRITING	6			
Subject-verb agreement - Noun-pronoun agreement - Misplaced modifiers - Articles - Prepositions - Redundancies - Clichés					
UNIT IV	NATURE AND STYLE OF SENSIBLE WRITING	6			
Describing - Defining - Classifying - Providing examples or evidence - Writing introduction and conclusion					
UNIT V	WRITING PRACTICES	6			
Comprehension - Précis Writing - Essay Writing					
					TOTAL : 30 PERIODS
OUTCOMES:		At the end of the course , the students will be able to			
1.	Acquire basic proficiency in English including reading and listening comprehension, writing and speaking skills.				

2.	Participate effectively in formal and informal conversations; introduce themselves and express their opinions in English.
3.	Comprehend conversations and deliver short talks in English.
4.	Write essays and descriptions of any kind in English.
5.	Prepare reports, graph presentation and Technical writing.

TEXT BOOKS:

1.	On Writing Well. William Zinsser. Harper Resource Book. 2001
2.	Study Writing. Liz Hamp-Lyons and Ben Heasley. Cambridge University Press. 2006.
3.	Communication Skills. Sanjay Kumar and PushpLata. Oxford University Press. 2011.

18ZMC205	CONSTITUTION OF INDIA											L	T	P	C
(Common to all Branches)												1	0	0	0
OBJECTIVES:															
0.	To provide understanding of basic concepts of Indian Constitution and various organs created by the constitution including their functions.														
UNIT I	INTRODUCTION													5	
Constitution" Definition and Classification - Constitutional Organs - Indian Constitution: Sources and constitutional history, Salient features of Indian Constitution - Citizenship, Preamble, Fundamental Rights and Duties, Directive Principles of State Policy Rule of Law - Separation of powers Constitution - Doctrine of Basic Structure.															
UNIT II	UNION GOVERNMENT & STATE GOVERNMENT AND THEIR ADMINISTRATION													5	
Distribution of Powers between Center and States Structure of the Indian Union: Federalism, Centre- State -relationship, President: Role, power and position, PM and Council of ministers, Cabinet and Central Secretariat, Lok Sabha, Rajya Sabha. Governor: Role and Position, CM and Council of ministers, State Secretariat: Organisation, Structure and Functions															
UNIT III	LOCAL ADMINISTRATION AND ELECTION COMMISSION													5	
District"s Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation, Pachayati raj: Introduction, PRI: Zila Pachayat, Elected officials and their roles, CEO Zila Pachayat: Position and role, Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy Emergency Provisions - Amendment of Election Commission: Role and Functioning, Chief Election Commissioner and Election Commissioners, State Election Commission: Role and Functioning, Institute and Bodies for the welfare of SC/ST/OBC and women															
												TOTAL : 15 PERIODS			
COURSE OUTCOMES					On completion of this course, students will be able to										
1.	Understand the basic concepts of Indian Constitution and various organs created by the constitution including their functions.														
TEXT BOOKS:															
1.	V.N. Shukla, "Constitution of India", EBC, 13th Edition, 2017.														
2.	M.P. Jain, "Indian Constitutional Law", LexisNexis, 8th Edition, 2018.														
3	H.M.Seervai, "Constitution of India", LexisNexis, Second edition, 2014.

18EMS206	CHEMISTRY LABORATORY	L	T	P	C
(Common to MECH, EEE, ECE & CSE)		0	0	3	1.5
OBJECTIVES:					
1.	To make students conversant with hands on water parameter analysis.				
2.	To make the student to acquire practical skills in the corrosion in metals.				
3.	To acquaint the students with the determination of molecular weight of a polymer by Ostwald viscometer.				
4.	To make the student acquire practical skills in analytical instruments.				
LIST OF EXPERIMENTS:					
<ol style="list-style-type: none"> Determination of total hardness of given water sample by EDTA method. Determination of alkalinity in given water sample. Determination of molecular weight of polyvinyl alcohol using Ostwald viscometer. Conductometric titration using mixture of acids and strong base. Determination of strength of in given hydrochloric acid using pH meter. Estimation of sodium present in water using flame photometer. Estimation of Zn present in effluent using Atomic Absorption Spectroscopy(AAS) Corrosion experiment – weight loss method Estimation of iron content of the given solution using potentiometer meter. Estimation of iron content of the given sample using Spectro photometer (thiocyanate method).\ 					
(Note: A minimum of SIX experiments shall be offered) List of equipments for a batch of 30 students					
<ol style="list-style-type: none"> Flame photometer - 5 nos Weighing balance - 5 nos Conductivity meter ; Potentiometer; pH meter- 9 nos each. Ostwald viscometer - 30 nos Atomic Absorption Spectrophotometer - 1 no. 					
Common apparatus: Pipette, Burette, Burette stand, Standard volumetric flask, funnel, Conical flask, porcelain tiles, dropper, reagent bottles, glass rod, beaker, wash bottle, test tube (30 nos each)					
COURSE OUTCOMES		At the end of the course students should be able to			
1.	The students will be outfitted with hands-on knowledge in the qualitative and quantitative chemical analysis of water quality related parameters, corrosion studies, heavy metal analysis, etc.

18MES207	PROGRAMMING IN PYTHON LABORATORY												L	T	P	C
													0	0	4	2
OBJECTIVES:																
•	To write, test, and debug simple Python programs.															
•	To implement Python programs with conditionals and loops.															
•	Use functions for structuring Python programs.															
•	Represent compound data using Python lists, tuples, and dictionaries.															
•	Read and write data from/to files in Python.															
LIST OF EXPERIMENTS:																
<ol style="list-style-type: none"> 1. Compute the GCD of two numbers. 2. Find the square root of a number (Newton,,s method). 3. Exponentiation (power of a number). 4. Find the maximum of a list of numbers. 5. Linear search and Binary search. 6. Selection sort, Insertion sort. 7. Merge sort. 8. First n prime numbers. 9. Multiply matrices. 10. Programs that take command line arguments (word count). 11. Find the most frequent words in a text read from a file. 12. Simulate elliptical orbits in Pygame. 13. Simulate bouncing ball using Pygame. 																
PLATFORM NEEDED																
<ul style="list-style-type: none"> • Python 3 interpreter for Windows/Linux 																
													TOTAL : 60 PERIODS			
OUTCOMES:																
On completion of this course, students will be able to																
1.	Write, test, and debug simple python programs and Implement with conditionals and loops.															
2.	Develop python programs step-wise by defining functions and calling them.															
3.	Use python lists, tuples, dictionaries for representing compound data and read and write data from/to files in python.															
COURSE ARTICULATION MATRIX:

18ZES208	WORKSHOP PRACTICE				L	T	P	C
(Common to MECH, EEE, ECE and CSE Branches)					1	0	4	3
COURSE OBJECTIVES:								
•	To make various basic prototypes in the carpentry trade such as Lap joint, Lap Tee joint, Dove tail joint, Mortise & Tenon joint and Cross-Lap joint							
•	To make various welding joints such as Lap joint, Lap Tee joint, Edge joint, Butt joint and Corner joint.							
LIST OF EXPERIMENTS:								
1. Introduction to use of tools and equipment in Carpentry, Welding, Foundry and Sheet metal 2. Safety aspects in Welding, Carpentry and Foundry 3. Half lap Joint and Dovetail Joint in Carpentry 4. Welding of Lap joint, Butt joint and T-joint 5. Preparation of Sand mold for cube, conical bush, pipes and V pulley 6. Fabrication of parts like tray, frustum of cone and square box in sheet metal 7. Electrical wiring – simple house wiring 8. Plumbing 9. CNC Machines demonstration and lecture on working principle. 10. Additive manufacturing demonstration and lecture on working principle.								
Lecture: 15 Periods Tutorial: 0 Periods Practical: 60 Periods Total: 75 Periods								
COURSE OUTCOMES:		on completion of this course, students will be able to						
1	Use tools and equipment used in Carpentry, Welding, Foundry and Sheet metal.							
2.	Make half lap joint dovetail joint in carpentry and welded lap joint, butt joint and T-joint							
3	Prepare sand mould for cube, conical bush, pipes and V pulley.							
4	Fabricate parts like tray, frustum of cone and square box in sheet metal							
5	Carry out minor works/repair related to electrical wiring and plumbing.							

MAPPING OF COs, POs AND PSOs:

3- Strong Correlation; 2 - Medium Correlation; 1 – Low Correlation															

18ZHS209	COMMUNICATION ENGLISH LAB	L	T	P	C
(Common to MECH & CSE)		0	0	2	1
OBJECTIVES:					
•	To develop their communicative competency in English with specific reference to their speaking and listening.				
•	To enhance their ability to communicate effectively in interviews, Group Discussion and Day to day life communication.				
•	To comprehend a different types of accent and use them in their communication				
UNIT I	PRONUNCIATION PRACTICE				6
Verbal Ability, Articulation of sounds- Intonation-Stress and Rhythm-Conversation practice-listening Various lectures					
UNIT II	COMMUNICATION AT WORKPLACE				6
Creative writing. Writing job applications - cover letter- resume- e-mails- memos- reports. Writing abstracts- summaries- interpreting visual texts.					
UNIT III	ENGLISH FOR NATIONAL AND INTERNATIONAL EXAMINATIONS AND PLACEMENTS				6
International English Language Testing System (IELTS)- Test of English as a Foreign Language (TOEFL)- Civil Service(Language related part) –English for competitive examinations					
UNIT IV	INTERVIEW SKILLS				6
Different types of Interview format- answering questions- offering information- mock interviews- Body languages.					
UNIT V	SOFT SKILLS				6
Motivation- emotional intelligence-Multiple intelligences- managing changes- time management- leadership traits- team work- career planning- creative and critical thinking					
TOTAL HOURS				30 Hrs	
OUTCOMES: At the end of the course, the students will be able to					
6.	Face interviews, group discussions and other language parameters in the job market				
7.	Write any competitive examinations which cover language part in it.				
8.	Take part in any English conversations of any kind in English. Flawlessly without fear and shyness.				
9.	Write articles for newspapers and magazines or any write-up in English without grammar mistakes.				

10.	Come out with leadership qualities, team work and career planning and will also possess critical and creative thinking.
TEXT BOOKS:

18MBS301	TRANSFORMS AND PARTIAL DIFFERENTIAL EQUATIONS	L	T	P	C
		3	1	0	4
OBJECTIVES					
•	To introduce Fourier series analysis which is central to many applications in engineering apart from its use in solving boundary value problems.				
•	To acquaint the student with Fourier transform techniques used in wide variety of situations.				
•	To introduce the effective mathematical tools for the solutions of partial differential equations that model several physical processes and to develop Z transform techniques for discrete time systems.				
UNIT I	PARTIAL DIFFERENTIAL EQUATIONS				9+3
Formation of partial differential equations – Singular integrals -- Solutions of standard types of first order partial differential equations - Lagrange's linear equation -- Linear partial differential equations of second and higher order with constant coefficients of both homogeneous and non-homogeneous types.					
UNIT II	FOURIER SERIES				9+3
Dirichlet's conditions – General Fourier series – Odd and even functions – Half range sine series – Half range cosine series – Complex form of Fourier series – Parseval's identity – Harmonic analysis.					
UNIT III	APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATIONS				9+3
Classification of PDE – Method of separation of variables - Solutions of one dimensional wave equation – One dimensional equation of heat conduction – Steady state solution of two dimensional equation of heat conduction (excluding insulated edges).					
UNIT IV	FOURIER TRANSFORMS				9+3
Statement of Fourier integral theorem – Fourier transform pair – Fourier sine and cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval's identity.					
UNIT V	Z - TRANSFORMS AND DIFFERENCE EQUATIONS				9+3
Z- transforms - Elementary properties – Inverse Z - transform (using partial fraction and residues) – Convolution theorem - Formation of difference equations – Solution of difference equations using Z - transform					
LECTURE: 45 TUTORIAL: 15 TOTAL : 60 PERIODS					
OUTCOMES:	On completion of this course, students will be able to				
1.	The understanding of the mathematical principles on transforms and partial differential equations would provide them the ability to formulate and solve some of the physical problems of engineering.				

TEXT BOOKS:

Average	3	2	1		1			1	1	2		2	3	2	
Round off	3	2	1		1			1	1	2		2	3	2	
3- Strong Correlation; 2 - Medium Correlation; 1 – Low Correlation															

18MES302	ENGINEERING MECHANICS	L	T	P	C
		3	1	0	4
OBJECTIVES					
•	To make the students to apply static equilibrium of rigid bodies both in two dimensions and also in three dimensions.				
•	To comprehend the effect of friction on equilibrium.				
•	To understand the geometrical properties of surfaces and solids				
•	To understand various terms involved in Projectiles.				
•	To apply dynamic equilibrium of particles in solving basic problems.				
UNIT I	INTRODUCTION TO MECHANICS AND FORCE CONCEPTS				9+3
Principles and Concepts – Laws of mechanics – system of forces – resultant of a force system – resolution and composition of forces –Lami’s theorem – moment of a force – physical significance of moment –Varignon’s theorem – resolution of a force into force and couple-- force in space – addition of concurrent force in space – equilibrium of a particle in space.					
UNIT II	BASIC STRUCTURAL ANALYSIS AND FRICTION				9+3
Beams and types of beams -Simple Trusses - Method of Joints - Method of Sections. Friction resistance – classification of friction – laws of friction – coefficient of friction – angle of friction - angle of repose – cone of friction –free body diagram – advantages – equilibrium of a body on a rough inclined plane – non- concurrent force system – ladder friction – rope friction – wedge friction-virtual work method.					
UNIT III	GEOMETRICAL PROPERTIES OF SECTION				9+3
Centroids – determination by integration – moment of inertia – theorems of moment of inertia – product of inertia – principal moment of inertia of plane areas – radius of gyration- Mass moment inertia of simple solids.					
UNIT IV	BASICS OF DYNAMICS - KINEMATICS				9+3
Kinematics and kinetics – displacements, velocity and acceleration – equations of motion – rectilinear motion of a particle with uniform velocity, uniform acceleration, varying acceleration – motion curves – motion under gravity –relative motion – curvilinear motion of particles – projectiles – angle of projection – range – time of flight and maximum height-kinematics of rigid bodies.					
UNIT V	BASICS OF DYNAMICS - KINETICS				9+3
Newton’s second law of motion – linear momentum – D’Alembert’s principle, dynamics equilibrium – work energy equation of particles – law of conservation of energy – principle of work and energy. Principles of impulse and momentum – equations of momentum – laws of conservation of momentum. impact – time of compression, restitution, collision – co-efficient of restitution – types of impact – collision of elastic bodies by direct central impact and oblique impact – collision of small body with a massive body – kinetic energy of a particle-kinetics of rigid body rotation.					

LECTURE: 45 TUTORIAL: 15 TOTAL : 60 PERIODS

OUTCOMES: On completion of this course, students will be able to

1. Explain the different principles of mechanics and to solve engineering problems dealing with forces.
2. Apply the concepts of friction to solve various problems dealing with friction
3. Explain the different geometrical properties of various sections.
4. Solve problems in rigid body dynamics (kinematic systems).
5. Solve problems in rigid body dynamics (kinetic systems).

18MPC303	MANUFACTURING TECHNOLOGY I	L	T	P	C
		3	0	0	3
OBJECTIVES					
<ul style="list-style-type: none"> To help students to acquire knowledge about different metal casting processes. 					
<ul style="list-style-type: none"> To acquire knowledge on various joining processes like welding, brazing, soldering, etc. 					
<ul style="list-style-type: none"> To enable them to understand various bulk deformation processes like forging, rolling, extrusion, etc. 					
<ul style="list-style-type: none"> To understand various operations performed in sheet metals. 					
<ul style="list-style-type: none"> To provide knowledge about various manufacturing techniques to fabricate plastic components. 					
UNIT I	METAL CASTING PROCESSES	9			
Introduction to concepts of manufacturing process -sand casting – sand moulds -type of patterns – pattern materials – pattern allowances, simple numerical problems – types of moulding sand – properties – core making – methods of sand testing –riser and gating design, simple numerical problems– moulding machines – types of moulding machines - melting furnaces- principles of special casting processes: shell-investment-pressure die casting-centrifugal casting-co ₂ process – sand casting defects					
UNIT II	JOINING PROCESSES	9			
Fusion welding processes – types of gas welding – equipments used – flame characteristics – filler and flux materials - arc welding equipments - electrodes –coating and specifications – principles of resistance welding – spot/butt, friction welding and friction stir welding – percussion welding – flux cored – submerged arc welding – electro slag and gas welding – TIG welding-MIG welding-brazing, soldering and adhesive bonding-weld defects.					
UNIT III	BULK DEFORMATION PROCESSES	9			
Hot working and cold working of metals – forging processes – open and close die forging – types of forging machines – typical forging operations – rolling of metals, simple numerical problems – flat strip rolling – types of rolling mills – tube piercing – principles of extrusion – types of extrusion – hot and cold extrusion – principle of rod and wire drawing.					
UNIT IV	SHEET METAL PROCESSES	9			
Sheet metal characteristics – shearing, bending and drawing operations – stretch forming operations– formability of sheet metal – test methods –special forming processes-working principle and applications – hydro forming – rubber pad forming – metal spinning– introduction of explosive forming, magnetic pulse forming, peen forming.					
UNIT V	POWDER METALLURGY AND MANUFACTURE OF PLASTIC COMPONENTS	9			
Introduction to powder metallurgy- Production of powders – mixing, blending, compacting, sintering and hot pressing - applications. Types and characteristics of plastics – moulding of thermoplastics and thermosets – working principles and typical applications – injection moulding – plunger and screw machines – compression moulding, transfer moulding –thermoforming.					
					TOTAL : 45 PERIODS

OUTCOMES:		On completion of this course, students will be able to														
1.	Apply the principles of metal casting for engineering applications.															
2.	Select suitable joining process for real time applications.															
3.	Applying bulk deformation processes according to industrial needs.															
4.	Explain and use appropriate metal forming operations in industries.															
5.	Explore power metallurgy technique and concepts of plastic component manufacturing.

18MPC304	ENGINEERING THERMODYNAMICS	L	T	P	C
		3	1	0	4
OBJECTIVES					
•	To enable students to understand the basic principles of classical thermodynamics and prepare them to apply basic conversion principles of mass and energy to closed and open systems.				
•	To understand second law of thermodynamics and apply it to various systems.				
•	To make them aware of various gas laws and thermodynamic relations.				
•	To impart knowledge on properties of pure substances and to analyse various vapour power cycles.				
•	To explore various laws of gas mixtures.				
UNIT I	CONCEPT OF THERMODYNAMICS	9+3			
Basic definitions, microscopic and macroscopic approach, types of systems – thermodynamic processes – point and path function – thermodynamic equilibrium – quasi-static process. Heat and work – zeroth law – first law of thermodynamics – applications to closed and open systems – steady flow processes – applications.					
UNIT II	SECOND LAW OF THERMODYNAMICS AND ENTROPY	9+3			
Second law of thermodynamics – Kelvin-Plank and Clausius statements-Carnot cycle – heat engines – refrigerators – heat pumps- efficiency and COP – entropy – principle of increase in entropy – availability- reversibility and irreversibility – applications.					
UNIT III	IDEAL AND REAL GASES, THERMODYNAMIC RELATIONS	9+3			
Properties of ideal gas- ideal and real gas comparison- equations of state for ideal and real gases-reduced properties- compressibility factor– generalised compressibility chart and its use - Maxwell relations, Tds equations, difference and ratio of heat capacities, energy equation, Joule-Thomson coefficient, Clausius Clapeyron equation, phase change processes. Simple calculations.					
UNIT IV	PROPERTIES OF STEAM AND VAPOUR POWER CYCLE	9+3			
Properties of steam – use of steam tables and Mollier chart – dryness fraction calculations. Basic Rankine cycle – Rankine cycle with reheating and regeneration – application of binary vapour cycle.					
UNIT V	GAS MIXTURES	9+3			

Mole and mass fraction, Dalton's and Amagat's Law. Properties of gas mixture – molar mass, gas constant, density, and change in internal energy, enthalpy, entropy and Gibbs function.	
LECTURE: 45 TUTORIAL: 15 TOTAL : 60 PERIODS	
OUTCOMES:	On completion of this course, students will be able to
1.	Apply thermodynamic principles to real life thermodynamic problems.
2.	Analyze the principles of entropy generation.
3.	Explain the characteristics of gases.
4.	Appreciate and analyze the vapour power cycles.
5.	Analyze properties of gas mixture.

18MPC305	FLUID MECHANICS AND FLUID MACHINERY			L	T	P	C
				3	0	0	3
OBJECTIVES							
•	To enable students to understand the basic principles of fluid mechanics and basic fluid properties.						
•	To understand and analyse fluid kinematics and dynamic problems.						
•	To get knowledge on flow through pipes and to know the importance of dimensional analysis.						
•	To conduct the performance study and selection of pumps for different applications						
•	To analyse various types of hydraulic turbines.						
UNIT I	FLUID PROPERTIES						9
Units and dimensions – fluid properties – density, specific gravity, viscosity, surface tension, capillarity, compressibility and bulk modulus – Pascal’s Law – pressure measurements – manometers - Fluid statics - Total pressure and centre of pressure on submerged surfaces.							
UNIT II	FLUID KINEMATICS AND DYNAMICS						9
Types of fluid flow and flow lines – control volume – continuity equation in one-dimension and three dimension – velocity potential and stream function -energy equation – Euler and Bernoulli’s equations – applications of energy equations- flow meters.							
UNIT III	FLOW THROUGH PIPES AND DIMENSIONAL ANALYSIS						9
Laminar flow through circular conduits and circular annuli-boundary layer concepts – types of boundary layer thickness – Darcy Weisbach equation –friction factor- Moody diagram- commercial pipes- minor losses – flow through pipes in series and parallel- hydraulic and energy gradient – methods of dimensional analysis – dimensionless parameters- application of dimensionless parameters – model analysis.							
UNIT IV	PUMPS						9
working principle - discharge, work done and efficiencies – gear, centrifugal and reciprocating pumps - work done and efficiencies - negative slip - flow separation conditions - air vessels - indicator diagram and its variation - savings in work done.							
UNIT V	HYDRAULIC TURBINE						9
Classification – construction, working principles and design of Pelton wheel, Francis and Kaplan turbines - head, losses, work done and efficiency - specific speed - operating characteristics - governing of turbines.							
						TOTAL : 45 PERIODS	
OUTCOMES:	On completion of this course, students will be able to						
1.	Identify the importance of fluids properties and fluid principles at rest.						

2.	Explore physical behaviour of fluids system and equations under moving conditions.
3.	Apply the concept of flow through pipes and dimensional analysis.
4.	Conduct the performance study and selection of pumps for different applications
5.	Conduct the performance test on different types of turbines.

3- Strong Correlation; 2 - Medium Correlation; 1 – Low Correlation

18MES306	BASIC ELECTRONICS ENGINEERING	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To understand the principles of different diodes.				
•	To study about the methods of biasing of BJTs, and the basic applications of operational amplifiers				
•	To introduce the methods of implementing Boolean expression using gates, and the concepts of transducers.				
UNIT I	SEMICONDUCTOR DIODE	9			
PN junction diode, Diode approximations and applications, half-wave rectifier, Two-diode Full wave rectifier, Bridge rectifier, Capacitor filter circuit, Zener diode-Voltage regulators, LASER diode, LDR, LED, LCD, Photo Transistor, Opto Coupler.					
UNIT II	BIPOLAR JUNCTION TRANSISTORS	9			
BJT operation, Common Base, Common Emitter and Common Collector Characteristics, DC Load line and Bias Point, Fixed Bias, Collector to base bias, Voltage divider Bias, Stability factor, BJT as switch and amplifier, MOSFET.					
UNIT III	INTRODUCTION TO OPERATIONAL AMPLIFIERS	9			
Ideal OPAMP, Inverting and non-inverting OPAMP circuits, OPAMP applications: Voltage follower, addition, subtraction, Integration, differentiation, Comparators, Schmitt trigger, Precision rectifier, Peak detector, Clipper and Clamper.					
UNIT IV	DIGITAL ELECTRONICS	9			
Logic Gates: AND, OR, NOT, NAND, NOR, Exclusive-OR and Exclusive-NOR. Algebraic simplification, NOR implementations, NAND implementations. Half Adder, Full adder.					
UNIT V	TRANSDUCERS	9			
Introduction, Passive Electrical Transducers, Resistive Transducers, Resistance thermometers, Thermistor. Linear Variable Differential Transformer (LVDT).Active Electrical transducers, Piezoelectric Transducer, Photoelectric Transducer.					
					TOTAL : 45 PERIODS
COURSE OUTCOMES:		Upon Completion of the course the students will			

1.	Apply the concept of diode in rectifiers, filter circuits.
2.	Understand the concept of BJT in amplifiers.
3.	Design simple electronic circuits using OPAMPS.
4.	Design and implement simple logic function using basic universal gates.
5.	Understand the basic principles of different types of transducers.

18MPC307	FLUID MECHANICS AND FLUID MACHINERY LABORATORY											L	T	P	C	
													0	0	3	1.5
OBJECTIVES																
•	To help the students in finding the various flow properties of fluids.															
•	To estimate the flow measurements using flow measuring equipment's.															
•	To conduct performance tests on pumps and turbines and draw the performance curves.															
LIST OF EXPERIMENTS:																
1. Determination of Darcy's friction factor.																
2. Determination of the Coefficient of discharge of given Orifice meter.																
3. Determination of the Coefficient of discharge of given Venturi meter.																
4. Calculation of the rate of flow using Rota meter.																
5. Performance study on Gear oil Pump.																
6. Conducting experiments and drawing the characteristic curves of centrifugal pump/ submersible pump.																
7. Conducting experiments and drawing the characteristic curves of reciprocating pump.																
8. Conducting experiments and drawing the characteristic curves of Pelton wheel.																
9. Conducting experiments and drawing the characteristics curves of Francis turbine.																
10. Conducting experiments and drawing the characteristic curves of Kaplan turbine.																
													TOTAL:45 PERIODS			
OUTCOMES:			On completion of this course, students will be able to													
1.	Find the flow properties of fluids.															
2.	Estimate the flow measurements using flow measuring equipment's.															
3.	Conduct performance tests on pumps and turbines and draw the performance curves.

18MPC308	MACHINE DRAWING											L	T	P	C
												0	0	4	2
OBJECTIVES															
•	To help the students to get knowledge on Limits, Fits, Tolerances, Geometric Dimensioning and Tolerancing.														
•	To develop sectional views of fasteners, joints and couplings and various machine elements														
•	To draw assembly of machine parts using Computer Aided Drawing software's.														
LIST OF EXERCISES:															
1. Introduction to “Limits, Fits, Tolerances, Geometric Dimensioning and Tolerancing” and corresponding symbols.															
2. Preparation of drawing for keys, keyways and cotter joints.															
3. Preparation of drawing for knuckle joints and threaded fasteners.															
4. Preparation of drawing foot step ball bearing, foot step journal bearing.															
5. Preparation of assembly drawing for screw jack.															
6. Preparation of drawing of stop valve –safety valve.															
7. Preparation of drawing of tailstock – tool head of shaper – machine vice –connecting rod.															
8. Preparation of drawing for flange and universal coupling (using any CAD software).															
9. Preparation of part and assembly drawing for Plummer block (using any CAD software).															
												TOTAL:60 PERIODS			
OUTCOMES:		On completion of this course, students will be able to													
1.	Understand Limits, Fits, Tolerances, Geometric Dimensioning and Tolerancing.														
2.	Develop sectional views of fasteners, joints and couplings and various machine elements														
3.	Draw assembly of machine parts using Computer Aided Drawing software's.

18MPC401	THERMALENGINEERING		L	T	P	C
			3	0	0	3
OBJECTIVES						
•	To enable the students understand different thermodynamic cycles.					
•	To understand the principles and working of IC engines.					
•	To introduce students to the working of steam nozzles and turbines.					
•	To design and analyse different types of air compressors with and without clearance					
•	To analyse various refrigeration and air-conditioning systems.					
UNIT I	THERMODYNAMIC CYCLES					9
Air standard cycles – Otto, Diesel, Dual and Brayton cycles – air standard efficiency – mean effective pressure – P-V and T-S diagrams-comparison of cycles.						
UNIT II	I.C. ENGINES					9
I.C engine - 2 stroke and 4 stroke engines – valve and port timing diagrams. Fuel ignition, cooling and lubrication system for spark ignition and compression ignition engines -Cetane and Octane rating of fuels – combustion, knocking and detonation, scavenging and supercharging – performance characteristics of I.C. engines.						
UNIT III	STEAM NOZZLES AND TURBINES					9
Flow through nozzles, shape of nozzle, effect of friction, critical pressure ratio and supersaturated flow. Impulse and reaction turbines – compounding, velocity diagrams for single stage turbines.						
UNIT IV	AIR COMPRESSOR					9
Reciprocating compressors – effect of clearance – multi stage – optimum intermediate pressure and perfect inter-cooling – rotary, centrifugal and axial flow compressors.						
UNIT V	REFRIGERATION AND AIR CONDITIONING					9
Air refrigeration cycles, simple vapour compression refrigeration cycle – sub cooling and super heating. Vapour absorption system. Principles of air conditioning – types of air conditioning system - Psychometric properties, psychometric charts, Property calculations of air vapour mixtures by using chart and expressions– Psychometric process – adiabatic saturation, sensible heating and cooling, humidification, dehumidification, evaporative cooling and adiabatic mixing.						
					TOTAL : 45 PERIODS	
OUTCOMES:		On completion of this course, students will be able to				
1.	Explain the functioning of thermodynamic cycles including actual cycles and draw P-V and T-S diagrams for them.					
2.	Understand the principles and working of Internal Combustion engines.					
3.	Analyse the functioning of steam nozzle and turbines.					
4.	Design and analyse different types of air compressors with and without clearance.					
5.	Explore the working principles of vapour compression and absorption refrigeration and					

	air conditioning system.

18MBS402	HUMAN VALUES AND PROFESSIONAL ETHICS	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	<i>To understand the capacity of making value judgments in real life situations and to overcome the crisis of values encountered in everyday life.</i>				
UNIT I	HUMAN VALUES	9			
Morals, Values and Ethics – Integrity – Work Ethic – Service Learning – Civic Virtue – Respect for Others – Living Peacefully – caring – Sharing – Honesty – Courage – Valuing Time – Co-operation – Commitment – Empathy – Self-Confidence – Character – Spirituality					
UNIT II	ENGINEERING ETHICS	9			
Senses of 'Engineering Ethics' - variety of moral issued - types of inquiry - moral dilemmas - moral autonomy - Kohlberg's theory - Gilligan's theory - consensus and controversy – Models of Professional Roles - theories about right action - Self-interest - customs and religion - uses of ethical theories.					
UNIT III	ENGINEERING AS SOCIAL EXPERIMENTATION	9			
Engineering as experimentation - engineers as responsible experimenters - codes of ethics - a balanced outlook on law - the challenger case study					
UNIT IV	SAFETY, RESPONSIBILITIES AND RIGHTS	9			
Safety and risk - assessment of safety and risk - risk benefit analysis and reducing risk - the three mile island and chernobyl case studies. Collegiality and loyalty - respect for authority - collective bargaining - confidentiality - conflicts of interest - occupational crime - professional rights - employee rights - Intellectual Property Rights (IPR) - discrimination.					
UNIT V	GLOBAL ISSUES	9			
Multinational corporations - Environmental ethics - computer ethics - weapons development - engineers as managers-consulting engineers-engineers as expert witnesses and advisors -moral leadership-sample code of Ethics like ASME, ASCE, IEEE, Institution of Engineers (India), Indian Institute of Materials Management, Institution of electronics and telecommunication engineers (IETE), India.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	<i>develop an ethical behavior under all situations</i>				
2.	<i>estimate the impact of self and organization's actions on the stakeholders and society.</i>				
TEXT BOOKS:					
1.	<i>Mike Martin and Roland Schinzinger, "Ethics in Engineering", McGraw-Hill, New York 1996.</i>

18MPC403	STRENGTH OF MATERIALS		L	T	P	C
			3	1	0	4
OBJECTIVES						
•	To make the students to understand the concepts of stress and strain.					
•	To draw shear force and bending moment diagrams for different types of beams.					
•	To apply theory of simple bending in beams and to understand the concept of principle stress.					
•	To evaluate slope and deflection different types of beams and to understand various theories of long columns.					
•	To evaluate stresses induced in the shaft due to torsion.					
UNIT I	STRESS AND STRAIN					9+3
Stress and strain at a point-tension, compression, shear stresses - Hooke's law - compound bars – lateral strain - Poisson's ratio -volumetric strain - bulk modulus - relationship among elastic constants – stress strain diagrams for mild steel, cast iron-ultimate stress - yield stress-factor of safety - thermal stresses - thin cylinders - strain energy due to axial force - resilience- stress due to gradual load, suddenly applied load and impact load.						
UNIT II	SHEAR FORCE AND BENDING MOMENT					9+3
Beams – types of beams - types of loads, supports - shear force – bending moment – shear forces and bending moment diagrams for cantilever, simply supported and over hanging beams with concentrated , uniformly distributed and uniformly varying load-relationship between rate of loading, shear force, bending moment- point of contra flexure.						
UNIT III	THEORY OF BENDING AND COMPLEX STRESSES					9+3
Theory of bending-bending equation-section modulus-stress distribution at a cross section due to bending moment and shear force for cantilever, simply supported beams with point, UDL loads (rectangular, circular, I & T sections only) -combined direct and bending stresses, kernel of section (rectangular, circular sections only). 2D state of stress – 2D normal and shear stresses on any plane-principal stresses and principal planes-principal strains and direction-Mohr's circle of stress.						
UNIT IV	DEFLECTION OF BEAMS AND THEORY OF LONG COLUMNS					9+3
Determinations of deflection curve – relation between slope, deflection and radius of curvature – slope and deflection of beam at any section by double integration, Moment Area and Macaulay's method - concept of conjugate beam method (theory only)- Euler's theory of long columns-expression of crippling load for various end conditions-effective length-slenderness ratio-limitations of Euler equation - Rankine formula for columns.						
UNIT V	THEORY OF TORSION					9+3
Torsion of shafts - torsion equation - polar modulus- stresses in solid and hollow circular shafts - torsional rigidity - power transmitted by the shaft – importance of angle of twist - strain energy due to torsion - modulus of rupture –torsional resilience – combined bending and torsion- stresses in helical springs - deflection of helical spring.						

LECTURE: 45 TUTORIAL : 15 TOTAL : 60 PERIODS

OUTCOMES: On completion of this course, students will be able to

1. Determine the stress, strain and modulus for different materials.
2. Draw shear force and bending moment diagrams for different beams.
3. Calculate the complex stresses in beams with different loading conditions.
4. Evaluate the deflection behaviour of beams and slender columns.
5. Apply the concepts of torsion in shafts and springs.

18MPC404	ENGINEERING MATERIALS AND METALLURGY	L	T	P	C
		3	0	0	3
OBJECTIVES					
•	To provide in depth knowledge to students about constitution of alloys and phase diagrams				
•	To make them aware of various heat treatment and surface treatment processes				
•	To impart knowledge on ferrous and non-ferrous metals				
•	To acquire knowledge on welding and casting metallurgy				
•	To understand the smart materials				
UNIT I	CONSTITUTION OF ALLOYS AND PHASE DIAGRAMS				9
Constitution of alloys – solid solutions, substitutional and interstitial -crystal physics – phase diagrams, isomorphous, eutectic, peritectic, eutectoid and peritectoid reactions, iron – iron carbide equilibrium diagram.					
UNIT II	HEAT TREATMENT AND SURFACE TREATMENT				9
Definition – full annealing, process annealing, stress relief, recrystallisation - spheroidizing – normalising, hardening and tempering of steels – austempering, martempering - isothermal transformation diagrams – cooling curves superimposed on I.T diagram- TTT, CCR - hardenability, Jominy end quench test - case hardening, carburising, nitriding, cyaniding, carbonitriding–flame and induction hardening.					
UNIT III	FERROUS AND NON-FERROUS METALS				9
Plain carbon steels – alloy steels - effect of alloying elements (Mn, Si, Cr, Mo, V , Ni, Ti& W) on properties of steel - stainless and tool steels – gray, white, malleable, spheroidal graphite - alloy cast irons – heat resistant steels and die steels. Copper, aluminium, magnesium, titanium - important alloys - their composition, properties and applications - material specification and standards.					
UNIT IV	CASTING AND WELDING METALLURGY				9
Solidification of pure metals and alloys – melting – super heating – fluxing – micro and macro segregation – hot tears – heat transfer and structural change. Weldability – heat distribution during welding and thermal effects on parent metals – HAZ – factors affecting HAZ – hardening – stress relief treatment of welds					
UNIT V	INTRODUCTION TO SMART MATERIALS				9
Introduction to smart materials - classifications - smart sensors and actuators - direct and reverse effects of piezoelectric materials, shape memory alloys, electro/magneto rheological fluids and magnetostrictive materials - applications.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				

1.	Predict the alloy components and composition variation with respect to temperature changes.
2.	Select suitable materials and heat treatment methods for various industrial applications.
3.	Explain the ferrous and nonferrous materials and their application.
4.	Apply the knowledge of casting and welding metallurgy to industrial applications
5.	Gain the knowledge about smart materials and applications

18MPC405	KINEMATICS OF MACHINES	L	T	P	C
		3	1	0	4
OBJECTIVES					
•	To make the students to understand the basics of mechanisms.				
•	To draw the velocity and acceleration diagram for simple mechanisms.				
•	To construct cam profile for given follower motion.				
•	To understand basics of gear and to develop gear trains for required application.				
•	To get knowledge to select appropriate type of friction drives for a specific application.				
UNIT I	BASICS OF MECHANISMS	9			
Classification of mechanisms – basic kinematic concepts and definitions – degree of freedom, mobility – Kutzbach criterion, Gruebler’s criterion – Grashof’s Law – kinematic inversions of four bar chain and slider crank chains – limit positions – mechanical advantage – transmission angle – description of some common mechanisms – quick return mechanisms- solving of simple problems.					
UNIT II	KINEMATIC ANALYSIS	9			
Displacement, velocity and acceleration analysis on simple mechanisms – graphical and analytical techniques- instantaneous center of velocity – Coriolis component – Klein’s construction for slider crank chain.					
UNIT III	KINEMATICS OF CAM MECHANISMS	9			
Classification of cams and followers – terminology and definitions – displacement diagrams uniform velocity, parabolic, simple harmonic and cycloidal motions – derivatives of follower motions – layout of plate cam profiles – specified contour cams – circular arc and tangent cams – pressure angle and undercutting – sizing of cams.					
UNIT IV	GEARS AND GEAR TRAINS	9			
Law of toothed gearing – involutes and cycloidal tooth profiles –spur gear terminology and definitions–gear tooth action – contact ratio – interference and undercut. Helical, bevel, worm. Gear trains – Speed ratio, train value – parallel axis gear trains – epicyclic gear Trains.					
UNIT V	FRICTION DRIVES	9			
Belt and rope drive – open and cross belt drive – belt materials – creep and slip - ratio of tensions – effect of centrifugal force – condition for maximum power – friction in journal bearing - flat pivot bearing - friction clutches – single plate – multi plate – cone clutches-brakes - shoe brake and internal expanding brake only.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Design simple mechanisms for practical applications.				
2.	Draw the velocity and acceleration diagram for simple mechanisms.				
3.	Construct cam profile for given follower motion.				
4.	Develop gear trains for required application.				

5.	Select appropriate type of friction drives for a specific application.

18ZMC406	ENVIRONMENTAL SCIENCE AND ENGG.	L	T	P	C
(ECE/EEE/CSE/MECH)		1	0	0	0
OBJECTIVES:					
•	To finding and implementing scientific, technological, economic and political solutions to environmental problems.				
•	To study the interrelationship between living organism and environment.				
•	To study the integrated themes and biodiversity, natural resources, pollution control and waste management.				
UNIT I	ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY (CO-a &b)				7
<p>concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers- types of ecosystem (forest ecosystem, grassland ecosystem, desert ecosystem, aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) - energy flow in the ecosystem – ecological succession processes –types – Introduction to biodiversity definition: genetic, species and ecosystem diversity – bio-geographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ conservation of biodiversity. Field study of common plants, insects, birds.</p> <p>Field study of simple ecosystems – pond, river, hill slopes, etc.</p>					
UNIT II	ENVIRONMENTAL POLLUTION (CO-a &c)				3
<p>Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards– solid waste management: causes, effects and control measures .</p> <p>Field study of local polluted site – Urban / Rural / Industrial / Agricultural.</p>					
UNIT III	NATURAL RESOURCES (CO-a &d)				5
<p>Forest resources: Use and over-exploitation, deforestation – Water resources: Use and overutilization of surface and ground water– Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems– Energy resources: renewable and non renewable energy sources, use of alternate energy sources.– Land resources- land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources.</p> <p>Field study of local area to document environmental assets – river / forest / grassland / hill</p>					
					TOTAL : 15 PERIODS
COURSE OUTCOMES					
Environmental Pollution or problems cannot be solved by mere laws. Public participation is an important aspect which serves the environmental Protection. One will obtain knowledge on the following after completing the course.					
1.	Ability to apply the knowledge of environmental science in identifying, to formulate and to				

	solve the environmental problems.														
2.	Public awareness of environmental function is at infant stage.														
3.	Ignorance and incomplete knowledge has led to misconceptions.														
4.	Development and improvement in std. of living has led to serious environmental disasters.

18MPC407	STRENGTH OF MATERIALS LABORATORY											L	T	P	C
												0	0	3	1.5
OBJECTIVES															
•	To help the students to practise the procedures for conducting various destructive testing methods like Tension, compression, impact test, etc.														
•	To analyse hardness of various materials like Mild Steel, Brass, Copper and Aluminium.														
•	To practice tension and compression test on springs.														
LIST OF EXPERIMENTS															
1. Tension Test on steel rods using Universal Testing Machine. 2. Bending Test on rolled steel Joist Beam. 3. Double shear test on mild steel rod. 4. Torsion Test on Mild steel rod 5. Tension and Compression Test on Springs 6. Deflection test on simply supported aluminium beam 7. Hardness tests on metals like Mild Steel, Brass, Copper and Aluminium 8. Bend Test on Steel rod 9. Compression Test 10. Impact test-Izod and Charpy															
												TOTAL : 45 PERIODS			
OUTCOMES:		On completion of this course, students will be able to													
1.	Apply knowledge of compression, tension, shear and torsion testing procedures on materials.														
2.	Explore the deflection and bending behaviour of different types of beams.														
3.	Examine the hardness of different metals and characterize materials based their test results.														
MAPPING OF COs, POs AND PSOs:

18MPC408	THERMAL ENGINEERING LABORATORY											L	T	P	C
												0	0	3	1.5
OBJECTIVES:															
•	To help the students to practise selection of suitable thermal devices for the specified industrial applications.														
•	To evaluate the performance of I.C engines.														
•	To conduct experiments on boiler, turbine, compressors, refrigerator and air-conditioner.														
LIST OF EXPERIMENTS:															
1. Valve timing and port timing diagrams of single cylinder diesel and petrol engines.															
2. Determination of flash point and fire point of various fuels / lubricants.															
3. Performance test on 4 stroke diesel engine with mechanical loading.															
4. Performance test on 4 stroke diesel engine with electrical loading.															
5. Performance test on 4 stroke diesel engine with hydraulic loading.															
6. Heat balance test on 4 stroke diesel engine.															
7. Retardation test to find frictional power of a diesel engine.															
8. Morse test on multi cylinder petrol engine.															
9. Performance and energy balance test on a steam generator.															
10. Performance and energy balance test on steam turbine.															
11. Performance test on single and twin stage reciprocating air compressor.															
12. Determination of COP of a vapour compression refrigeration system.															
13. Determination of COP of air –conditioning system.															
14. Performance test in a vapour absorption refrigeration system.															
												TOTAL:45 PERIODS			
OUTCOMES:		On completion of this course, students will be able to													
1.	Select the suitable thermal devices for the specified industrial applications.														
2.	Evaluate the performance of I.C engines.														
3.	Conduct experiments on boiler, turbine, compressors, refrigerator and air-conditioner.

18MPC501	DESIGN OF MACHINE ELEMENTS	L	T	P	C
(Use of PSG Design data book is permitted)		3	1	0	4
OBJECTIVES					
•	To make the students to understand the Design methodology for machine elements.				
•	To Design shafts and couplings for power transmission.				
•	To Design the threaded fasteners, bolted joints and welded joints for pressure vessels and structures.				
•	To Design the various types of springs like helical, leaf springs and Flywheels under constant loads and varying loads.				
•	To Design various types of bearings like Rolling contact and Sliding contact bearings.				
UNIT I	INTRODUCTION TO MACHINE DESIGN				9
Introduction to the Design process – Factors influencing machine design – selection of materials based on mechanical properties - preferred numbers – Limits, Fits, tolerances - Principal stresses - Theories of failure – Factor of safety –stress concentration – Direct , Bending and Torsional loading – Design for variable loading.					
UNIT II	DESIGN OF SHAFTS AND COUPLINGS				9
Design of solid and hollow shafts based on strength, rigidity - critical speed – Keys, keyways and splines - Rigid and flexible couplings.					
UNIT III	DESIGN OF TEMPORARY AND PERMANENT JOINTS				9
Threaded fasteners - Bolted joints subjected to eccentric loading, Knuckle joints, Cotter joints – Design of welded joints, Riveted joints for structures.					
UNIT IV	DESIGN OF ENERGY STORING ELEMENTS				9
Design of various types of springs, optimization of helical springs - rubber springs - Design of flywheels considering stresses in rims and arms, for engines and punching machines.					
UNIT V	DESIGN OF BEARINGS				9
Sliding contact and rolling contact bearings - Design of hydrodynamic journal bearings, McKee's Equation. Sommerfield Number, Raimondi & Boyd graphs, - Selection of Rolling Contact bearings.					
TOTAL : 45 PERIODS					
OUTCOMES:	On completion of this course, students will be able to				
1.	Apply the principles of design to solve problems dealing with static and variable loads.				
2.	Design shafts and couplings for various industrial applications.				
3.	Estimate the load carrying capacity of threads, welds and rivet joints.				
4.	Select and Design Springs and flywheels for various applications.				
5.	Apply the concept of selection and design rolling and sliding contact bearings.

18MPC502	HEAT AND MASS TRANSFER		L	T	P	C
(use of approved HMT data book is permitted)			3	1	0	4
OBJECTIVES						
•	To make the students to understand the concept of conduction heat transfer.					
•	To understand the convective heat transfer mechanism.					
•	To determine the amount of radiation heat exchange between surfaces and its thermal relations.					
•	To analyse the phase change heat transfer and sizing of heat exchanger.					
•	To evaluate the mass transfer through diffusion and convection mechanism.					
UNIT I	CONDUCTION					9+3
General Differential equation of Heat Conduction– Cartesian and Polar Coordinates – One Dimensional Steady State Heat Conduction — plane and Composite Systems – Conduction with Internal Heat Generation – Extended Surfaces – Unsteady Heat Conduction.						
UNIT II	CONVECTION					9+3
Principles of convection – convection boundary layer – laminar and turbulent flow – empirical relations for external and internal forced convection flows – flat plate, cylinders, spheres – empirical relations for free convection flows – horizontal cylinders, horizontal plates, vertical planes, inclined surfaces and enclosed spaces.						
UNIT III	RADIATION					9+3
Nature of thermal radiation – radiation intensity – relation to emission, irradiation and radiosity – black body radiation – loss of radiation – emissivity – surface emission – Kirchoff’s law – gray surface – view factor – radiation exchange between black surfaces – radiation exchange between gray surfaces – electrical analogy – radiation shields.						
UNIT IV	CONDENSATION, BOILING AND HEAT EXCHANGERS					9+3
Condensation and Boiling – Film wise and drop wise condensation – Film condensation on a vertical plate – Regimes of Boiling – Forced convection boiling- Heat Exchanger Types - Overall Heat Transfer Coefficient – Fouling Factors –Heat transfer Analysis: LMTD method - NTU method.						
UNIT V	MASS TRANSFER					9+3
Basic Concepts – Diffusion Mass Transfer – Fick’s Law of Diffusion – Steady state Molecular Diffusion – Convective Mass Transfer – Momentum, Heat and Mass Transfer Analogy – Convective Mass Transfer Correlations.						
LECTURE: 45 TUTORIAL: 15 TOTAL : 60 PERIODS						
OUTCOMES:	On completion of this course, students will be able to					
1.	Apply basic principles of heat conduction to find heat transfer rate in steady state and transient systems.					
2.	Asses the concept of free and forced convection for various heat transfer applications.					

3.	Analyze the radiation heat transfer problems and radiation shields.
4.	Analyze the phase change heat transfer and heat exchanger.
5.	Assess different mass transfer systems.

18MPC503	MANUFACTURING TECHNOLOGY II	L	T	P	C
		3	0	0	3
OBJECTIVES					
•	To help students to acquire knowledge about the theory of metal cutting process.				
•	To acquire knowledge on Lathes, Shaping and planing machines.				
•	To enable them to understand the principles and operations of Drilling, Broaching and Grinding machines.				
•	To understand principle and working of Milling and Gear generation machines.				
•	To provide knowledge about various Modern manufacturing process.				
UNIT I	THEORY OF METAL CUTTING				9
Mechanism of metal cutting – types – cutting force – chip formation – Merchant’s circle diagram – calculations – tool geometry – machinability-thermal aspects – tool wear – tool life – cutting tool materials – cutting fluids – types.					
UNIT II	AUTOMATS, SHAPING AND PLANING MACHINES				9
Lathe, Capstan and turret lathes – construction - indexing mechanism - operations - working principle of single and multi - spindle automats – shaping and planing machines – types – construction - mechanism – principle of operation – different shaping operations - work holding devices.					
UNIT III	DRILLING, BROACHING AND GRINDING MACHINES				9
Drilling machines – specifications, types - feed mechanism, operations – drill tool nomenclature – broaching – specifications, types, tool nomenclature, broaching operations – grinding – types of grinding machines – grinding wheels, specifications – bonds – mounting and reconditioning of grinding wheels.					
UNIT IV	MILLING AND GEAR GENERATING MACHINES				9
Milling – specifications – types - cutter nomenclature – types of cutters – milling processes – indexing – gear forming in milling – gear generation - gear shaping and gear hobbing – specifications - cutters–coated tools & inserts- cutting spur and helical gears - bevel gear generators – gear finishing methods.					
UNIT V	NC,CNC AND RPT				9
Numerical Control (NC) machine tools – CNC types, constructional details, special features, machining centre, part programming fundamentals CNC – manual part programming– Introduction to RPT.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				

1.	Apply the theory of metal cutting in real life machining.
2.	Explore the operating mechanisms of lathe, shaping and planing machine.
3.	Compare the working principles of drilling, boring and grinding machines.
4.	Understand the principles, operation and working of milling and gear generating machine.
5.	Explain the concept of NC,CNC and RPT.

18MPC504	METROLOGY AND MEASUREMENTS	L	T	P	C
		3	0	0	3
OBJECTIVES					
•	To make the students to understand the basics of metrology.				
•	To explore different types of linear and angular measuring instruments.				
•	To understand the various form measurement techniques.				
•	To get knowledge on various power, flow and temperature measurements.				
•	To provide them the latest advances in metrology.				
UNIT I	BASICS OF METROLOGY				9
Introduction to Metrology – Need – Elements – Work piece, Instruments – Persons – Environment –their effect on Precision and Accuracy – Errors – Errors in Measurements – Types – Control – Types of standards – Introduction to interferometry - Reliability and Calibration – Readability and Reliability.					
UNIT II	LINEAR MEASUREMENTS				9
Linear Measuring instruments - Vernier instruments - micrometer, height gauge, dial indicators, Bore gauges, Slip gauges, Comparators -Mechanical, Electrical, Optical and Pneumatic, Optical Projector.					
UNIT III	ANGULAR AND FORM MEASUREMENTS				9
Angle measuring instruments - Bevel protractor, Spirit level, Sine bar, Autocollimator, Angle dekkor - Applications. Principles and Methods of straightness – Flatness measurement – Thread measurement, gear measurement, surface finish measurement, Roundness measurement – Applications – Limit gauges.					
UNIT IV	MEASUREMENT OF POWER, FLOW AND TEMPERATURE				9
Force, torque, power - mechanical, Pneumatic, Hydraulic and Electrical type. Flow measurement: Venturi meter, Orifice meter, rota meter, pitot tube – Temperature: bimetallic strip, thermocouples, Electrical resistance thermometer – Pressure measurement.					
UNIT V	ADVANCES IN METROLOGY				9
Tool maker’s microscope - Computer controlled CMM - Universal measuring machine - Automatic and multidimensional inspection machine - Computer aided inspection -Machine vision measurement system -Laser interferometer – Introduction to Clean room.					
TOTAL : 45 PERIODS					
OUTCOMES:	On completion of this course, students will be able to				
1.	Interpret the need, errors and types of measurement.				
2.	Identify and compare various linear and angular measuring instruments.				

3.	Identify and compare various form measurement techniques.
4.	Explain the principle of measuring power, flow and temperature.
5.	Discuss the recent advances in metrology.

18MPC506	MANUFACTURING AND METROLOGY LABORATORY	L	T	P	C
		0	0	4	2
OBJECTIVES					
●	To study and practice the various operations that can be performed in lathe, drilling, milling and shaping machines.				
●	To do Gear cutting using milling and hobbing machines and to perform operations in Grinding machines.				
●	To familiarize the students on the working of various measuring instruments and to perform measurements of parts to check the quality.				
LIST OF EXPERIMENTS:					
MANUFACTURING LABORATORY					
<ol style="list-style-type: none"> 1. Facing, plain, step and taper turning. 2. Knurling and chamfering and thread cutting (external). 3. Counter sinking ,drilling and boring 4. Contour milling using vertical milling machine. 5. Spur gear cutting in milling machine. 6. Gear generation in Hobbing machine. 7. Plain Surface grinding. 					
METROLOGY LABORATORY					
<ol style="list-style-type: none"> 1. Tool Maker's Microscope 2. Comparator 3. Sine Bar 4. Gear Tooth Vernier Caliper 5. Surface Finish Measuring Equipment 6. Vernier Height Gauge 7. Temperature, Force and torque Measurement 8. Machine Vision Measurement systems 					
					TOTAL:45 PERIODS
OUTCOMES:		On completion of this course, students will be able to			
1.	Demonstrate and fabricate different types of components using the machine tools.				
2.	Set up machines like lathe shaper, grinding and milling machine for various applications.				
3.	Handle different measurement instrument and to perform measurements to check quality of parts.

18MPC507	HEAT AND MASS TRANSFER LABORATORY		L	T	P	C
			0	0	3	1.5
OBJECTIVES						
•	To make the students to perform experiments on heat transfer applications.					
•	To analyse the performance of a refrigeration systems.					
•	To understand and perform experiments on air conditioning system.					
LIST OF EXPERIMENTS:						
HEAT TRANSFER EXPERIMENTS:						
1. Thermal conductivity measurement using guarded plate apparatus.						
2. Thermal conductivity measurement of pipe insulation using lagged pipe apparatus.						
3. Determination of heat transfer coefficient under natural convection from a vertical cylinder.						
4. Determination of heat transfer coefficient under forced convection from a tube.						
5. Determination of Thermal conductivity of composite wall.						
6. Determination of Thermal conductivity of insulating powder.						
7. Heat transfer from pin-fin apparatus (natural & forced convection modes).						
8. Determination of Stefan – Boltzmann constant.						
9. Determination of emissivity of a grey surface.						
10. Effectiveness of Parallel/counter flow heat exchanger.						
REFRIGERATION AND AIR CONDITIONING EXPERIMENTS:						
1. Determination of COP of a refrigeration system.						
2. Experiments on Psychometric processes.						
3. Performance test on a Reciprocating air compressor.						
4. Performance test in a HC Refrigeration System.						
5. Performance test in a Fluidized Bed Cooling Tower						
6. Devices for thermal collectors and storage						
						TOTAL: 45 PERIODS
OUTCOMES:		On completion of this course, students will be able to				
1.	Apply the fundamental principles of heat transfer to predict the thermal conductivity and heat transfer coefficient.					
2.	Demonstrate the refrigeration and air conditioning cycle and predict COP of a refrigeration cycle.					
3.	Determine the amount of heat transfer in conduction, convection and radiation.

18MPR508	PROJECT I / WINTER INTERNSHIP	L	T	P	C
		0	0	3	1.5
OBJECTIVES					
•	To provide opportunity to explore a problem or issue of particular personal or professional interest.				
•	To address the problem or issue through focused study and applied research under the direction of a faculty member.				
•	To synthesize and apply the knowledge and skills acquired in his/her academic program to real-world issues and problems.				
•	To improve ability to think critically and creatively, to solve practical problems,				
•	To make reasoned and ethical decisions, and to communicate effectively.				
<p>The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepare a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews in that any one review will be conducted with external examiner.</p> <p>The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.</p> <p style="text-align: center;">(or)</p> <p>A Minimum of 2 weeks internship in reputed organization during summer vacation</p>					
					TOTAL : 45 PERIODS
OUTCOMES:		On completion of this course, students will be able to			
1	Identify the real time Engineering problems in their day to day life.				
2	Apply the knowledge and skills acquired in their courses to a specific problem or issue				
3	Think critically and creatively to address and help solve these professional or social issues and to further development.				
4	Refine research skills and demonstrate their proficiency in written and oral communication skills.				
5	Take on the challenges of teamwork, prepare a presentation in a professional manner, and document all aspects of design work.

18MPC601	DYNAMICS OF MACHINERY	L	T	P	C
		3	1	0	4
OBJECTIVES					
•	To make the students to understand the concepts of dynamics of reciprocating engines.				
•	To understand the balancing procedures for rotating and reciprocating masses, rotors and engines.				
•	To analyse the effect of free and forced vibration.				
•	To understand the governor mechanism for speed control of machines.				
•	To give insight effect of gyroscope and its application.				
UNIT I	FORCE ANALYSIS				9
Dynamic force analysis – Inertia force and Inertia torque– D Alembert’s principle –Dynamic Analysis in reciprocating engines – Gas forces – Inertia effect of connecting rod– Bearing loads – Crank shaft torque – Turning moment diagrams –Fly Wheels.					
UNIT II	BALANCING				9
Static and dynamic balancing – balancing of rotating masses–Balancing of Reciprocating masses - Primary and secondary unbalanced forces-partial balancing of unbalanced primary force-partial balancing of Locomotives-Variation of tractive force, Swaying couple and Hammer blow.					
UNIT III	FREE VIBRATION				9
Basic features of vibratory systems –degrees of freedom– free vibration – equations of motion – natural frequency – types of damping – damped vibration - critical speeds of simple shaft – Torsional systems: single, two rotor systems.					
UNIT IV	FORCED VIBRATION				9
Response of one degree of freedom systems to periodic forcing – Harmonic disturbances – Disturbance caused by unbalance – Support motion –transmissibility – Vibration isolation vibration measurement.					
UNIT V	MECHANISMS FOR CONTROL				9
Governors – Types – Centrifugal governors – Gravity controlled and spring controlled centrifugal governors – Characteristics – Effect of friction – Controlling force curves. Gyroscopes – Gyroscopic forces and torques – Gyroscopic stabilization – Gyroscopic effects in Automobiles, ships and airplanes.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Analyze the forces in mechanisms.				
2.	Apply the concept of balancing and use it for reducing the unbalanced forces in rotating masses and reciprocating engines.				
3.	Apply the concept of free vibration for industrial applications.				

4.	Analyze forced vibrations of machines, engines and structures.
5.	Calculate the gyroscopic couple on various vehicles and apply concept of governors.

18MPC602	FINITE ELEMENT ANALYSIS		L	T	P	C
			3	1	0	4
OBJECTIVES						
•	To make the students to understand the basics concepts of finite element analysis.					
•	To provide them in depth knowledge in approximate methods in structural mechanics problems.					
•	To understand one dimensional finite element analysis with various types of elements.					
•	To get exposed to plane problems in engineering analysis including two dimensional finite element analysis.					
•	To understand the usage of higher order element in finite element analysis.					
UNIT I	INTRODUCTION					9+3
Historical background-basic concept of FEM – discretization of 1D, 2D and 3D Domains, mesh refinement, convergence requirements - gradient and divergence theorems - boundary and initial value problems – simple case studies.						
UNIT II	CHARACTERISTIC MATRICES AND LOAD VECTORS					9+3
One dimensional governing equations - structural and heat transfer problems - variational method-variation calculus – weighted residual methods - Galerkin’s method - Ritz method - generalized coordinate’s approach - principle of minimization of potential energy - simple case studies.						
UNIT III	ONE DIMENSIONAL PROBLEMS					9+3
Derivation of shape functions, Stiffness matrices and force vectors - Assembly of Matrices - shape function characteristics - problems in axial load members, trusses, heat transfer through composite walls and fins - Gauss elimination and Cholesky’s methods of solving equations-simple case studies.						
UNIT IV	TWO DIMENSIONAL PROBLEMS					9+3
Derivation of shape functions for CST and LST triangular and rectangular elements, Stiffness matrices and force vectors-Pascal’s triangle- concept of plane stress and plain strain and axis-symmetry. Structural and heat transfer application -introduction to coupled field analysis - simple case studies.						
UNIT V	HIGHER ORDER ELEMENTS					9+3
Natural co-ordinate systems – Isoparametric elements – Shape functions for isoparametric elements – One and two dimensions – Jacobian transformation - Serendipity and Lagrangian elements – Numerical integration - Matrix solution technique - simple case studies.						
LECTURE : 45 TUTORIAL : 15 TOTAL : 60 PERIODS						
OUTCOMES:	On completion of this course, students will be able to					
1.	Recognize the basic fundamental equations of elasticity and solving linear system of equation.					
2.	Make familiar of basic approximate methods in Structural applications.					

3.	Solve one dimensional structural and heat transfer problems.
4.	Analyze and solve two dimensional problems.
5.	Solve problems using higher order elements.

18MPC603	ADDITIVE MANUFACTURING	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To make the students to know the principle methods, areas of usage, possibilities and limitations as well as environmental effects of the Additive Manufacturing technologies.				
•	To familiarise the characteristics of the different materials those are used in Additive Manufacturing.				
•	To familiarize with Liquid based and Solid based additive manufacturing technologies.				
•	To expose to other additive manufacturing technologies like 3Dprinter, ballistic particle method, Shape deposition modelling, Reverse engineering.				
•	To familiarize with the post processing and tooling methods of additive manufacturing technologies.				
UNIT I	INTRODUCTION				9
Overview – History – Need-Classification -Additive Manufacturing Technology in product development-Materials for Additive Manufacturing Technology – Tooling - Applications.					
UNIT II	CAD & REVERSE ENGINEERING				9
Basic Concept – Digitization techniques – Model Reconstruction – Data Processing for Additive Manufacturing Technology: CAD model preparation – Part Orientation and support generation – Model Slicing –Tool path Generation – Software’s for Additive Manufacturing Technology: MIMICS, MAGICS.					
UNIT III	LIQUID BASED AND SOLID BASED ADDITIVE MANUFACTURING SYSTEMS				9
Classification – Liquid based system – Stereo-lithography Apparatus (SLA)- Principle, process, advantages and applications - Solid based system –Fused Deposition Modelling - Principle, Process, Advantages and Applications, Laminated Object Manufacturing.					
UNIT IV	POWDER BASED ADDITIVE MANUFACTURING SYSTEMS				9
Selective Laser Sintering – Principles of SLS process - Process, advantages and applications, 3D Printing - Principle, process, advantages and applications- Laser Engineered Net Shaping (LENS), Electron Beam Melting.					
UNIT V	MEDICAL AND BIO-ADDITIVE MANUFACTURING				9
Customized implants and prosthesis: Design and production - Bio-Additive Manufacturing- Computer Aided Tissue Engineering (CATE) – Case studies.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Compare different methods and discuss the effects of the Additive Manufacturing technologies.				

2.	Learn the applications of CAD in tool path generation.
3.	Gain knowledge about liquid and solid based additive manufacturing systems.
4.	Analysing about powder based additive manufacturing systems.
5.	Understand the medical and bio additive manufacturing systems.

18MPC606	SIMULATION LABORATORY	L	T	P	C
		0	0	3	1.5
OBJECTIVES					
•	To make the students to analyse various structural problems using CAE software's.				
•	To analyse various thermal and heat transfer problems using CAE software's.				
•	To solve simple problems using Mat lab, CFD and Multi body dynamics software's.				
LIST OF EXPERIMENTS:					
A. SIMULATION					
1. MATLAB basics, Dealing with matrices, Graphing-Functions of one variable and two variables.					
2. Use of Mat lab to solve simple problems in vibration.					
3. Mechanism Simulation using Multi body Dynamic software.					
B. ANALYSIS					
1. Force and Stress analysis using link elements in Trusses, cables etc.					
2. Stress and deflection analysis in beams with different support conditions.					
3. Stress analysis of flat plates and simple shells.					
4. Stress analysis of axi – symmetric components.					
5. Thermal stress and heat transfer analysis of plates.					
6. Thermal stress analysis of cylindrical shells.					
7. Vibration analysis of spring-mass systems.					
8. Model analysis of Beams.					
9. Harmonic, transient and spectrum analysis of simple systems.					
10. Buckling analysis of column.					
11. Coupled thermal and structural analysis.					
12. Simple CFD analysis problems.					
					TOTAL:45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Get exposure to software tools needed to analyse engineering problems.				
2.	Apply simulation and analysis software tools to find solution for different real time Problems.				
3.	Carry out simple flow problems using simulation and analysis software's.

18MPC607	DYNAMICS OF MACHINERY LABORATORY	L	T	P	C
		0	0	3	1.5
OBJECTIVES					
•	To make the students to understand and demonstrate the principles of kinematic mechanisms.				
•	To perform experiments on governors and gyroscope systems and able to analyse its efficiencies.				
•	To understand the principles of vibrating system and to determine the performance of a vibrating system.				
LIST OF EXPERIMENTS					
<ol style="list-style-type: none"> 1. a) Study of gear parameters. <ol style="list-style-type: none"> b) Experimental study of velocity ratios of simple, compound, Epicyclic and differential gear trains. 2. a) Kinematics of Four Bar, Slider Crank, Crank Rocker, Double crank, Double rocker, Oscillating cylinder Mechanisms. <ol style="list-style-type: none"> b) Kinematics of single and double universal joints. 3. a) Determination of Mass Moment of Inertia using bifilar suspension and compound pendulum. 4. Motorized gyroscope – Study of gyroscopic effect and couple. 5. Governor - Determination of range sensitivity, effort etc., for Watt, Porter, Proell, and Hartnell Governors. 6. Cams – Cam profile drawing, Motion curves and study of jump phenomenon. 7. Determination of natural frequency of a spring mass system. 8. Determination of torsional natural frequency of single and Double Rotor systems. 9. Vibration of Equivalent Spring mass system – undamped and damped vibration. 10. Whirling of shafts – Determination of critical speeds of shafts with concentrated loads. 11. a) Balancing of rotating masses. <ol style="list-style-type: none"> b) Balancing of reciprocating masses. 12. a) Transverse vibration of Free-Free beam – with and without concentrated masses. <ol style="list-style-type: none"> b) Forced Vibration of Cantilever beam – Mode shapes and natural frequencies. c) Determination of transmissibility ratio using vibrating table. 					
					TOTAL: 45 PERIODS
OUTCOMES:					
OUTCOMES:		On completion of this course, students will be able to			
1.	Demonstrate the principles of kinematics of machinery.				
2.	Demonstrate the principles of dynamics of machinery.				
3.	Use the measuring devices for dynamic testing.

18HSC608	SOFT SKILLS AND PERSONALITY DEVELOPMENT LABORATORY	L	T	P	C
(BE - MECH)		0	0	3	1.5
OBJECTIVES					
•	To help the students to improve the listening, speaking, reading and writing skills.				
•	To make them prepare for national and international examinations and placements.				
•	To help them to face the interviews and to improve soft skills.				
UNIT I	LISTENING AND SPEAKING SKILLS	9			
Conversational skills (formal and informal)-making effective presentations using computers, listening/watching debates, documentaries. Listening to lectures, discussions from TV/ Radio/ Podcast.					
UNIT II	READING AND WRITING SKILLS	9			
Reading different genres of texts ranging from newspapers to creative writing. Writing different types of Applications and complaints- Writing reviews – film appreciation- thesis writing –posture making-advertisement-magazine preparation					
UNIT III	ENGLISH FOR NATIONAL AND INTERNATIONAL EXAMINATIONS AND PLACEMENTS	9			
International English Language Testing System (IELTS) - Test of English as a Foreign Language (TOEFL) - Civil Service (Language related)- Verbal Ability.					
UNIT IV	SOFTSKILLS	9			
Motivation- emotional intelligence-Multiple intelligences- - career planning -creative and critical thinking.					
UNIT V	EMPLOYABILITY AND CORPORATE SKILLS	9			
Interview skills – Types of interview, preparation for interview, mock interview. Group Discussion leadership and co-ordination. Time management and effective planning- Stress management – causes and effect-stress relief techniques					
TOTAL					45 PERIODS
OUTCOMES:		On completion of this course, students will be able to			
1	Make presentations and participate in group discussions.				
2	Take international examinations such as IELTS and TOEFL.				
3	Successfully answer questions in interviews.				
4	Create postures, advertisements and magazine making which are the parts of writing skills.				
5	Write film – appreciation, book review and Thesis writing which are the part of analytical thinking and creative writing				

MAPPING OF COs, POs AND PSOs:

	POs												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1					1		1	3	3						3
CO2					1		1	3	3						3
CO3					1		1	3	3						3
Average					1.0		1.0	3.0	3.0						3.0
Round off					1		1	3	3						3
3- Strong Correlation; 2 - Medium Correlation; 1 – Low Correlation															

18MPC701	AUTOMATION IN MANUFACTURING	L	T	P	C
		3	0	0	3
OBJECTIVES					
•	To understand the importance of automation in the of field machine tool based Manufacturing.				
•	To get the knowledge of various elements of hydraulic system and designing new hydraulic systems.				
•	To explore pneumatic systems and designing fluid power circuits				
•	To programme programmable logic controllers.				
•	To design simple mechatronics systems.				
UNIT I	INTRODUCTION TO AUTOMATION				8
Basic concepts of automated system -Elements of Automation - Advanced automated functions - Levels of automation - Current trends - Advantages and Limitations of Automation -CAD, CAM, CIM - Rigid automation: Part handling, Machine tools - Flexible automation: Computer control of Machine Tools and Machining Centers -Adaptive Control, Automated Material handling - Flexible fixturing - Low Cost Automation – Assembly Automation.					
UNIT II	HYDRAULIC SYSTEMS				9
Industrial Hydraulics: Principles of hydraulics, Hydraulic fluids, Filtration technology, Hydraulic pumps, Hydraulic valves, and hydraulic actuators, Proportional valves. Hydraulic Systems: Design considerations for hydraulic circuit, Standards in circuit diagram representation, Power pack design layout, Basic hydraulic circuits such as regenerative circuits, sequencing circuit, meter in and meter out circuit, Design of reservoir based on heat transfer considerations, Design of accumulators and intensifiers, Selection of standard components for hydraulic circuits.					
UNIT III	PNEUMATIC SYSTEMS AND DESIGN OF FLUID POWER CIRCUITS				10
Operational principles and application of pneumatic systems, air compressors, Pneumatic cylinders and air motors, Pneumatic valves, Design of pneumatic circuits, hydro-pneumatic, Control in pneumatic system. Design of Fluid Power Circuit: Design method consideration for sequential circuits - intuitive circuit design method - cascade method - sequential logic circuit design using KV method - compound circuit design -step counter design.					
UNIT IV	PROGRAMMABLE LOGIC CONTROLLERS				9
PLC Hardware- Electrical Design and Construction - Logical Sensors - Presence detection-Continuous Sensor-continuous actuators- PLC operation - Latches, Timers, Counters, Internal relays, Shift Registers, Master and Jump Controls,Analog Inputs and Outputs – PLC- programming- Programming Methods - Programming the PLC using Ladder diagram - Design Cases.					
UNIT V	MECHATRONICS SYSTEM DESIGN				9
Introduction and components of mechatronics, sensors, and actuators. Mechanical & Electro mechanical Systems, Pneumatics and Hydraulics, Mechatronics in Engineering Design, Traditional and mechatronics design, Applications - Pick and Place robots, Car park barriers, Bar code reader, Wind screen wiper wing stepper motor control– Traffic Control interface - IOT applications – Industry					

4.0.Case studies: Coin counters, Robot walking machine.	
TOTAL : 45 PERIODS	
OUTCOMES:	On completion of this course, students will be able to
1.	Get a comprehensive picture of computer based automation of manufacturing operations Explain the key elements of automation.
2.	Explain the various elements of hydraulic systems and designing new hydraulic power circuits
3.	Design fluid power circuits
4.	Understand the PLC and develop programs using ladder logic.
5.	Design the mechatronics systems for various applications.

18MPC702	DESIGN OF TRANSMISSION SYSTEMS	L	T	P	C
(Use of PSG Design data book is permitted)		3	0	0	3
OBJECTIVES					
•	To make the students to understand and design the flexible elements of a transmission system.				
•	To design clutch and brake system.				
•	To understand and design spur and helical gears of transmission system.				
•	To understand and design bevel and worm gears.				
•	To design and develop gear box for different applications.				
UNIT I	DESIGN OF FLEXIBLE ELEMENTS				9
Design of Flat belts and pulleys - Selection of V belts and pulleys – Selection of hoisting wire ropes and pulleys – Design of Transmission chains and Sprockets.					
UNIT II	FRICTION CLUTCHES AND BRAKES				9
Design of plate clutches – axial clutches-cone clutches - Band and Block brakes - external shoe brakes – Internal expanding shoe brakes.					
UNIT III	SPUR AND HELICAL GEARS				9
Speed ratios and number of teeth-Force analysis -Tooth stresses - Dynamic effects – Fatigue strength - Factor of safety - Gear materials – Design of straight tooth spur & helical gears based on strength and wear considerations – Pressure angle in the normal and transverse plane- crossed helical gear terminology - estimating the size of the pair of crossed-helical gears.					
UNIT IV	BEVEL AND WORM GEARS				9
Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth, estimating the dimensions of pair of straight bevel gears. Worm Gear: Merits and demerits – Terminology. Thermal Capacity, Materials-forces and stresses, efficiency, estimating the size of the worm gear pair.					
UNIT V	GEAR BOX				9
Geometric progression - standard step ratio - ray diagram, kinematic layout - design of sliding mesh and constant mesh gear box - introduction to planetary gear box.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Design various flexible elements of a machine.				
2.	Apply the concept of clutch and brake in new design.				
3.	Design spur and helical gears for various applications.				
4.	Design Bevel and worm gears of a transmission system.				
5.	Develop and design gear box for various applications.

18MPC706	CAD/CAM AND MECHATRONICS LABORATORY		L	T	P	C
			0	0	4	2
OBJECTIVES						
●	To help the students to develop 2D and 3D models of machine elements using modelling software.					
●	To prepare CNC part programming and to perform manufacturing in CNC machines.					
●	To apply the fundamental principles of programmable controllers to the solution of practical problems.					
LIST OF EXPERIMENTS						
3D GEOMETRIC MODELING						
1. Introduction of 3D Modelling software						
Creation of 3D assembly model of following machine elements using 3D Modelling software						
2. Plummer Block						
3. Screw Jack						
4. Universal Joint						
5. Stuffing box						
6. Connecting rod						
MANUAL PART PROGRAMMING						
(i) Part Programming - CNC Machining Centre						
a) Linear Cutting.						
b) Circular cutting.						
c) Cutter Radius Compensation.						
(ii) Part Programming - CNC Turning Centre						
a) Straight, Taper and Radius Turning.						
b) Thread Cutting.						
c) Rough and Finish Turning Cycle.						
MECHATRONICS						
1. Stepper motor interface.						
2. Speed control of DC motor.						
3. Modelling and analysis of basic hydraulic, pneumatic and electrical circuits.						
4. PLC control of electro-pneumatic and electro-hydraulic systems.						
					TOTAL:45 PERIODS	
OUTCOMES:		On completion of this course, students will be able to				
1.	Develop 2D and 3D models using modelling software.					
2.	Prepare CNC part programming and perform manufacturing in CNC machines.					
3.	Apply the fundamental principles of programmable controllers to the solution of practical problems.

18MPR707	PROJECT II		L	T	P	C
			0	0	6	3
OBJECTIVES						
•	To provide opportunity to explore a problem or issue of particular personal or professional interest.					
•	To address the problem or issue through focused study and applied research under the direction of a faculty member.					
•	To synthesize and apply the knowledge and skills acquired in his/her academic program to real-world issues and problems.					
•	To improve ability to think critically and creatively, to solve practical problems,					
•	To make reasoned and ethical decisions, and to communicate effectively.					
<p>It is intended to start the project work early in the seventh semester and carry out both design and fabrication of a mechanical device whose working can be demonstrated. The design is expected to be completed in the seventh semester and the fabrication and demonstration will be carried out in the eighth semester.</p> <p>The students in a group of 3 to 4 works on a topic approved by the head of the department under the guidance of a faculty member and prepare a comprehensive project report after completing the work to the satisfaction of the supervisor. The progress of the project is evaluated based on a minimum of three reviews in that any one review will be conducted with external examiner.</p> <p>The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.</p>						
					TOTAL : 90 PERIODS	
OUTCOMES:		On completion of this course, students will be able to				
1	Identify the real time Engineering problems in their day to day life.					
2	Apply the knowledge and skills acquired in their courses to a specific problem or issue					
3	Think critically and creatively to address and help solve these professional or social issues and to further development.					
4	Refine research skills and demonstrate their proficiency in written and oral communication skills.					
5	Take on the challenges of teamwork, prepare a presentation in a professional manner, and document all aspects of design work.

18MPE001	INTERNAL COMBUSTION ENGINES	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To make the students to understand the underlying principles of operation of different IC Engines and components.				
•	To understand the working of engine auxiliary systems.				
•	To analyse the combustion aspects of SI Engines.				
•	To understand the combustion aspects of CI Engines.				
•	To provide knowledge on pollutant formation, control, alternate fuel etc.				
UNIT I	SPARK IGNITION ENGINES				9
Mixture requirements - Feedback Control Carburettors – Properties of Fuel - Injection systems – Mono point and Multipoint injection – Gasoline Direct Injection – Ignition Systems-Stages of combustion - Normal and Abnormal combustion-Knock - Factors affecting knock - Combustion Chambers.					
UNIT II	COMPRESSION IGNITION ENGINES				9
Diesel Fuel Injection Systems - Stages of combustion – Knocking – Factors affecting knock – Direct and Indirect injection systems – Combustion chambers – Fuel Spray behaviour – Spray structure and spray penetration – Air motion - Introduction to Turbocharging.					
UNIT III	POLLUTANT FORMATION AND CONTROL				9
Pollutant – Sources – Formation of Carbon Monoxide, Unburnt hydrocarbon, Oxides of Nitrogen, Smoke and Particulate matter – Methods of controlling Emissions – Catalytic converters, Selective Catalytic Reduction and Particulate Traps – Methods of measurement – Emission norms and Driving cycles. EGR – Lean burning.					
UNIT IV	ALTERNATIVE FUELS				9
Alcohol, Hydrogen, Compressed Natural Gas, Liquefied Petroleum Gas and Bio Diesel - Properties, Suitability, Merits and Demerits - Engine Modifications.					
UNIT V	RECENT TRENDS				9
Air assisted Combustion, Homogeneous Charge Compression Ignition Engines – Variable Geometry turbochargers – Common Rail Direct Injection Systems - Hybrid Electric Vehicles – NOx adsorbers -Onboard Diagnostics.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Analyse the combustion characteristics of SI engine.				
2.	Evaluate the combustion characteristics of CI engine.				
3.	Understand the sources of pollutants and methods of controlling emissions.				
4.	Learn the different alternative fuels.				

5.	Apply the latest technologies of engine system.

18MPE002	MECHATRONICS SYSTEMS	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To impart knowledge about the various elements and techniques involved in mechatronics systems.				
•	To understand the working of 8085 microprocessor and 8051 microcontroller.				
•	To provide knowledge on programmable peripheral interface.				
•	To understand the working of programmable logic controller.				
•	To provide knowledge on actuators and to design mechatronic systems for a given application.				
UNIT I	INTRODUCTION				9
Introduction to Mechatronics – Systems – Concepts of Mechatronics approach – Need for Mechatronics – Emerging areas of Mechatronics – Classification of Mechatronics. Sensors and Transducers: Static and dynamic Characteristics of Sensor, Potentiometers – LVDT – Capacitance sensors – Strain gauges – Eddy current sensor – Hall effect sensor – Temperature sensors – Light Sensors.					
UNIT II	MICROPROCESSOR AND MICROCONTROLLER				9
Introduction – Architecture of 8085 – Pin Configuration – Addressing Modes –Instruction set, Timing diagram of 8085 –introduction to 8051, Arduino, Case studies.					
UNIT III	PROGRAMMABLE PERIPHERAL INTERFACE				9
Introduction – Architecture of 8255, Keyboard interfacing, LED display –interfacing, ADC and DAC interface, Temperature Control – Stepper Motor Control – Traffic Control interface.					
UNIT IV	PROGRAMMABLE LOGIC CONTROLLER				9
Introduction – Basic structure – Input and output processing – Programming – Mnemonics – Timers, counters and internal relays – Data handling – Selection of PLC.					
UNIT V	ACTUATORS AND MECHATRONIC SYSTEM DESIGN				9
Types of Stepper and Servo motors – Construction – Working Principle – Advantages and Disadvantages. Design process-stages of design process – Traditional and Mechatronics design concepts – Case studies of Mechatronics systems – Pick and place Robot – Engine Management System – Automatic car park barrier.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Discuss the interdisciplinary applications of Electronics, Electrical, Mechanical and Computer Systems for the Control of Mechanical, Electronic Systems and sensor technology.				
2.	Discuss the architecture of Microprocessor and Microcontroller, Pin Diagram, Addressing Modes of Microprocessor and Microcontroller.				

3.	Discuss Programmable Peripheral Interface, Architecture of 8255 PPI, and various device interfacing.
4.	Explain the architecture, programming and application of programmable logic controllers to problems and challenges in the areas of Mechatronic engineering.
5.	Discuss various Actuators and Mechatronics system using the knowledge and skills acquired through the course and also from the given case studies.

18MPE003	MICROPROCESSORS IN AUTOMATION	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To help the students to understand the fundamentals of microprocessors.				
•	To learn various cycles and interfacing methods.				
•	To get knowledge on assembly language programming.				
•	To Familiarise different types of convertors and data communication methods.				
•	To explore digital control techniques.				
UNIT I	FUNDAMENTALS OF MICROPROCESSORS				9
Number Systems, codes, digital electronics: Logic Gates, combinational circuits design, Flip-flops, Sequential logic circuits design: Counters, Shift registers. Introduction to 8085 Functional Block Diagram, Registers, ALU, Bus systems, Timing and control signals.					
UNIT II	CYCLES AND INTERFACING				9
Machine cycles, instruction cycle and timing states, instruction timing diagrams, Memory interfacing.					
UNIT III	ASSEMBLY LANGUAGE PROGRAMMING				9
Addressing modes, Instruction set, simple programs in 8085; Concept of Interrupt, Need for Interrupts, Interrupt structure, Multiple Interrupt requests and their handling, Programmable interrupt controller; Interfacing peripherals: Programmable peripheral interface (8255).					
UNIT IV	CONVERTORS AND DATA COMMUNICATION				9
Interfacing Analog to Digital Converter & Digital to Analog converter, Multiplexed seven segments LED display systems, Stepper Motor Control, Data Communication: Serial Data communication (8251), Programmable Timers (8253); 8086/8088 Microprocessor and its advanced features.					
UNIT V	DIGITAL CONTROL				9
Introduction to Digital Control: Sampling theorem, Signal conversion and Processing, Z Transform, Digital Filters, Implementation of Digital Algorithm.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Understand the fundamentals of microprocessors.				
2.	Analyse various cycles and interfacing methods.				
3.	Perform assembly language programming.				
4.	Design different types of convertors and data communication methods.				
5.	Explore various digital control techniques.

18MPE004	PROCESSING OF COMPOSITE MATERIALS		L	T	P	C
			3	0	0	3
OBJECTIVES:						
•	To make the students to understand different processing methods and various types of composites.					
•	To get knowledge on processing of polymer matrix composites.					
•	To explore various types of metal matrix composites and their processing techniques.					
•	To familiarise ceramic matrix composites and special composites.					
•	To study the mechanics used to analyse the composites.					
UNIT I	INTRODUCTION TO COMPOSITES					9
Fundamentals of composites – need for composites – enhancement of properties – classification of composites – Matrix-Polymer matrix composites (PMC), Metal matrix composites (MMC), Ceramic matrix composites (CMC) – Reinforcement – particle reinforced composites, Fibre reinforced composites. Applications of various types of composites. Fibber production techniques for glass, carbon and ceramic fibres. Introduction to Nano composites.						
UNIT II	POLYMER MATRIX COMPOSITES					9
Polymer resins – thermosetting resins, thermoplastic resins – reinforcement fibres – rovings – woven fabrics – non woven random mats – various types of fibres. PMC processes – hand layup processes – spray up processes – compression moulding – reinforced reaction injection moulding – resin transfer moulding – Pultrusion – Filament winding – Injection moulding. Fibre reinforced plastics (FRP), Glass Fibre Reinforced Plastics (GFRP). Laminates- Balanced Laminates, Symmetric Laminates, Angle Ply Laminates, Cross Ply Laminates.-applications of PMC in aerospace, automotive industries.						
UNIT III	METAL MATRIX COMPOSITES					9
Characteristics of MMC, various types of metal matrix composites, alloy vs. MMC, advantages of MMC, limitations of MMC, Reinforcements – particles – fibres. Effect of reinforcement – volume fraction – rule of mixtures. Processing of MMC – powder metallurgy process – diffusion bonding – stir casting – squeeze casting, a spray process, Liquid infiltration In-situ reactions-Interface-measurement of interface properties- applications of MMC in aerospace, automotive industries.						
UNIT IV	CERAMIC MATRIX COMPOSITES AND SPECIAL COMPOSITES					9
Engineering ceramic materials – properties – advantages – limitations – monolithic ceramics – need for CMC – ceramic matrix – various types of ceramic matrix composites- oxide ceramics – non oxide ceramics – aluminium oxide – silicon nitride – reinforcements – particles- fibres-whiskers. Sintering – Hot pressing – Cold isostatic pressing (CIPing) – Hot isostatic pressing (HIPing). Applications of CMC in aerospace, automotive industries- Carbon /carbon composites – advantages of carbon matrix – limitations of carbon matrix carbon fibre – chemical vapour deposition of carbon on carbon fibre perform. Sol-gel technique- Processing of Ceramic Matrix composites.						

UNIT V	MECHANICS OF COMPOSITES	9
<p>Lamina Constitutive Equations: Lamina Assumptions – Macroscopic Viewpoint. Generalized Hooke’s Law. Reduction to Homogeneous Orthotropic Lamina – Isotropic limit case, Orthotropic Stiffness matrix (Qij), Definition of stress and Moment Resultants. Strain Displacement relations. Basic Assumptions of Laminated anisotropic plates. Laminate Constitutive Equations – Coupling Interactions, Balanced Laminates, Symmetric Laminates, Angle Ply Laminates, Cross Ply Laminates. Laminate Structural Moduli. Evaluation of Lamina Properties from Laminate Tests. Quasi Isotropic Laminates. Determination of Lamina stresses within Laminates.</p>		
		TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to	
1.	Understand different techniques to process different types of composites and know the limitations of each process.	
2.	Learn the processing techniques of polymer matrix composites.	
3.	Understand various types of metal matrix composites and their processing techniques.	
4.	Get knowledge on processing techniques of ceramic matrix composites and special composites.	
5.	Use of Mathematical techniques to predict the macroscopic properties of different Laminates.

18MPE005	COMPUTER AIDED DESIGN		L	T	P	C
			3	0	0	3
OBJECTIVES:						
•	To make the students to understand fundamentals of computer graphics.					
•	To gain knowledge on geometric modelling techniques.					
•	To learn various visual realism techniques and algorithms.					
•	To familiarise assembly modelling.					
•	To understand various cad standards.					
UNIT I	FUNDAMENTALS OF COMPUTER GRAPHICS					9
Product cycle- Design process- sequential and concurrent engineering- Computer aided design – CAD system architecture- Computer graphics – co-ordinate systems- 2D and 3D transformations homogeneous coordinates - Line drawing -Clipping- viewing transformation.						
UNIT II	GEOMETRIC MODELLING					9
Representation of curves- Hermite curve- Bezier curve- B-spline curves-rational curves- Techniques for surface modeling – surface patch- Coons and bicubic patches- Bezier and B-spline surfaces. Solid modeling techniques- CSG and B-rep.						
UNIT III	VISUAL REALISM					9
Hidden – Line-Surface-Solid removal algorithms – shading – colouring – computer animation.						
UNIT IV	ASSEMBLY OF PARTS					9
Assembly modelling – interferences of positions and orientation – tolerance analysis-mass property calculations – mechanism simulation and interference checking.						
UNIT V	CAD STANDARDS					9
Standards for computer graphics- Graphical Kernel System (GKS) - standards for exchange images- Open Graphics Library (OpenGL) - Data exchange standards - IGES, STEP, CALSetc. - communication standards.						
					TOTAL : 45 PERIODS	
OUTCOMES:	On completion of this course, students will be able to					
1.	Understand fundamentals computer graphics.					
2.	Apply various geometric modelling techniques.					
3.	Learn visual realism techniques and hidden line, surface and solid removal algorithms.					
4.	Understand assembly modelling techniques and tolerance analysis.					
5.	Explore various cad standards.

18MPE006	OPERATIONS RESEARCH		L	T	P	C
			3	0	0	3
OBJECTIVES:						
•	To provide students the knowledge of optimization techniques and approaches.					
•	To enable them to understand the various transportation and network models.					
•	To understand the different Inventory models.					
•	To study the various queueing models and its applications.					
•	To understand the different decision models and apply them for optimization.					
UNIT I	LINEAR MODELS					9
Introduction to Operations Research – Linear Programming - Mathematical Formulation – Graphical method – Simplex method – Duality – Two Phase Simplex method .						
UNIT II	TRANSPORTATION AND NETWORK MODELS					9
Transportation Assignment Models – Traveling Salesman problem - Network models – Shortest route – Minimal spanning tree – Maximum flow models – Project network – CPM and PERT networks – Critical path scheduling.						
UNIT III	INVENTORY MODELS					9
Inventory models – Various Costs and Concepts – EOQ – Deterministic inventory models – Production models – Stochastic Inventory models – Buffer stock.						
UNIT IV	QUEUEING MODELS					9
Queueing models - Queueing systems and structures – Notation parameter – Single server and multi-server models – Poisson input – Exponential service – Constant rate service – Infinite population – Simulation – Sequencing models.						
UNIT V	DECISION MODELS					9
Decision models – Game theory – Two person zero sum games – Graphical solution- Algebraic solution– Linear Programming solution – Replacement models – Models based on service life – Economic life – Single / Multi variable search technique.						
						TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to					
1.	Interpret the concepts of Linear programming techniques.					
2.	Apply the concept of CPM, PERT and sequencing models for engineering problems.					
3.	Explain the concept of different Inventory models and its applications in engineering.					
4.	Apply the concept of queueing models for different problems.					
5.	Analyze various decision models and apply for various applications.

18MPE007	THEORY OF METAL CUTTING	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To make the students to understand the concept and basic mechanics of metal cutting.				
•	To understand the nomenclature of standard machine tools.				
•	To understand the various thermal aspects of cutting fluids.				
•	To analyse the cutting tool materials, tool life and tool wear.				
•	To design the cutting tools.				
UNIT I	ORTHOGONAL CUTTING				9
Introduction - Machining fundamentals – Metal Cutting - Chip formation - types of chips - Chip breakers - Expression for Shear plane angle - Cutting force and velocity relationship - Ernst and Merchant Upper bound solution - Lee and Shaffer Lower bound solution - Oxley's thin shear zone model - Stress and Strain in the chip - Energy consideration in machining.					
UNIT II	OBLIQUE CUTTING				9
Direction of Chip flow - Normal, Velocity and Effective Rake angles - Relationship between rake angles - Cutting ratios in oblique cutting - Shear angle and Velocity relationship - Stabler's rule.					
UNIT III	THERMAL ASPECTS AND CUTTING FLUIDS				9
Heat distributions in machining - Experimental determination and Analytical calculation of cutting tool temperature - Cutting fluids - Effects of cutting fluid - Functions - Requirements - Types and Selection of Cutting Fluids.					
UNIT IV	CUTTING TOOL MATERIALS, TOOL LIFE AND TOOL WEAR				9
Essential requirements of tool materials – development of tool materials - Tool wear and Tool life - Machinability - Economics of metal machining - Theory of Chatter.					
UNIT V	DESIGN OF CUTTING TOOLS				9
Nomenclature of Single point and Multi point cutting tools - Design of Turning tool, Drills and Milling cutters.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Applying the orthogonal metal cutting theory in engineering.				
2.	Evaluating the oblique metal cutting theory in engineering.				
3.	Learn Heat distributions in machining and cutting fluids.				
4.	Understand the essential requirements of tool material and its life.				
5.	Design the cutting tools for metal removal process.

18MPE008	WELDING TECHNOLOGY		L	T	P	C
			3	0	0	3
OBJECTIVES:						
•	To make the student to understand the basics of welding technology.					
•	To understand the basic concepts of welding metallurgy.					
•	To understand welding techniques for various materials.					
•	To learn the various advanced welding processes.					
•	To acquire the knowledge of testing of weldments.					
UNIT I	GAS AND ARC WELDING PROCESSES					9
Fundamental principles – Air-acetylene welding, Oxy-acetylene welding, Carbon arc welding, Shielded metal arc welding, Submerged arc welding, TIG & MIG welding, Plasma arc welding and Electro-slag welding processes - advantages, limitations and applications.						
UNIT II	RESISTANCE WELDING PROCESSES					9
Spot welding, Seam welding, Projection welding, Resistance Butt welding, Flash Butt welding, Percussion welding and High frequency resistance welding processes - advantages, limitations and applications.						
UNIT III	SOLID STATE WELDING PROCESSES					9
Cold welding, Diffusion bonding, Explosive welding, Ultrasonic welding, Friction welding, Forge welding, Roll welding and Hot pressure welding processes - advantages, limitations and applications.						
UNIT IV	OTHER WELDING PROCESSES					9
Thermit welding, Atomic hydrogen welding, Electron beam welding, Laser beam welding, Friction stir welding, Underwater welding, Welding automation in aerospace, nuclear and surface transport vehicles, Cold metal transfer and explosive welding.						
UNIT V	DESIGN OF WELD JOINTS, WELDABILITY AND TESTING OF WELDMENTS					9
Various weld joint designs - Heat affected zone – Weldability of different materials – Weld defects - destructive and non-destructive testing for weldments.						
					TOTAL : 45 PERIODS	
OUTCOMES:	On completion of this course, students will be able to					
1.	Learn and Compare different types of Welding processes.					
2.	Analyse the principles of resistance welding processes.					
3.	Understand the concept of solid state welding process.					
4.	Analyse the weldability and weld defects.					
5.	Learn different testing methods for weldment.

18MPE009	REFRIGERATION AND AIR CONDITIONING	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To make the students to understand vapour compression and vapour absorption system Operation.				
•	To analyse the refrigeration cycles and methods for improving Performance.				
•	To acquire the knowledge on components of refrigeration systems.				
•	To design air conditioning systems using cooling load calculations.				
•	To explore the application of refrigeration and air conditioning systems.				
UNIT I	INTRODUCTION				9
Introduction to Refrigeration - Unit of Refrigeration and C.O.P. – Ideal cycles- Refrigerants Desirable properties – Classification - Nomenclature - ODP & GWP.					
UNIT II	VAPOUR COMPRESSION REFRIGERATION SYSTEM				9
Vapour compression cycle: p-h and T-s diagrams - deviations from theoretical cycle – sub cooling and super heating- effects of condenser and evaporator pressure on COP- multi pressure system – low temperature refrigeration - Cascade systems – problems. Equipments: Type of Compressors, Condensers, Expansion devices, Evaporators.					
UNIT III	OTHER REFRIGERATION SYSTEMS				9
Working principles of Vapour absorption systems and adsorption cooling systems – Steam jet refrigeration- Ejector refrigeration systems- Thermoelectric refrigeration- Air refrigeration - Magnetic -Vortex and Pulse tube refrigeration systems.					
UNIT IV	PSYCHOMETRIC PROPERTIES AND PROCESSES				9
Properties of moist Air-Gibbs Dalton law, Specific humidity, Dew point temperature, Degree of saturation, Relative humidity, Enthalpy, Humid specific heat, Wet bulb temperature, Thermodynamic wet bulb temperature, Psychrometric chart, Psychrometric of air-conditioning processes, mixing of airstreams.					
UNIT V	AIR CONDITIONING SYSTEMS AND LOAD ESTIMATION				9
Air conditioning loads- Outside and inside design conditions- Heat transfer through structure- Solar Radiation- Electrical appliances- Infiltration and ventilation- internal heat load-Apparatus selection-fresh air load-Human comfort & IAQ principles- effective temperature & chart-calculation of summer & winter air conditioning load- Classifications- Layout of plants- Air distribution system- Filters- Air-conditioning Systems with Controls- Temperature, Pressure and Humidity sensors, Actuators & Safety controls.					
					TOTAL : 45 PERIODS
OUTCOMES: On completion of this course, students will be able to					
1.	Analyze different refrigeration systems and refrigerants.				

2.	Understand the concept of vapor compression refrigeration system.
3.	Learn the components and working of other refrigeration and air conditioning systems
4.	Evaluate different psychometric properties and processes.
5.	Perform heating and cooling load calculations.

18MPE010	POWER PLANT ENGINEERING	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To help the students to learn the various cycles of coal based thermal power plants.				
•	To gain knowledge on diesel, gas turbine and combined cycle power plants.				
•	To familiarise the basics of nuclear engineering and various types of reactors.				
•	To learn how to get power from renewable energy sources.				
•	To Understand energy, economic and environmental issues of power plants.				
UNIT I	COAL BASED THERMAL POWER PLANTS	9			
Rankine cycle - improvisations, Layout of modern coal power plant, Super Critical Boilers, FBC Boilers, Turbines, Condensers, Steam & Heat rate, Subsystems of thermal power plants – Fuel and ash handling, Draught system, Feed water treatment. Binary Cycles and Cogeneration systems.					
UNIT II	DIESEL, GAS TURBINE AND COMBINED CYCLE POWER PLANTS	9			
Otto, Diesel, Dual & Brayton Cycle - Analysis & Optimisation. Components of Diesel and Gas Turbine power plants. Combined Cycle Power Plants. Integrated Gasifier based Combined Cycle systems.					
UNIT III	NUCLEAR POWER PLANTS	9			
Basics of Nuclear Engineering, Layout and subsystems of Nuclear Power Plants, Working of Nuclear Reactors : Boiling Water Reactor (BWR), Pressurized Water Reactor (PWR), CANada Deuterium- Uranium reactor (CANDU), Breeder, Gas Cooled and Liquid Metal Cooled Reactors. Safety measures for Nuclear Power plants.					
UNIT IV	POWER FROM RENEWABLE ENERGY	9			
Hydro Electric Power Plants – Classification, Typical Layout and associated components including Turbines. Principle, Construction and working of Wind, Tidal, Solar Photo Voltaic (SPV), Solar Thermal, Geo Thermal, Biogas and Fuel Cell power systems.					
UNIT V	ENERGY, ECONOMIC AND ENVIRONMENTAL ISSUES OF POWER PLANTS	9			
Power tariff types, Load distribution parameters, load curve, Comparison of site selection criteria, Relative merits & demerits, Capital & Operating Cost of different power plants. Pollution control technologies including Waste Disposal Options for Coal and Nuclear Power Plants.					
					TOTAL : 45 PERIODS
OUTCOMES: On completion of this course, students will be able to					
1.	Learn the various cycles of coal based thermal power plants.				
2.	Gain knowledge on diesel, gas turbine and combined cycle power plants.				
3.	Understand the basics of nuclear engineering and various types of reactors.				

4.	Design power plants to get energy from renewable energy sources.
5.	Analyse energy, economic and environmental issues of power plants.

18MPE011	GAS DYNAMICS AND JET PROPULSION	L	T	P	C
(Use of Approved Gas table is Permitted)		3	0	0	3
OBJECTIVES:					
•	To provide students with an insight into the applications of compressible flows and the fundamentals of jet propulsion system.				
•	To enable them to formulate and solve problems in one –dimensional steady compressible flow.				
•	To derive the conditions for change in pressure, density and temperature for flows through normal and oblique shocks.				
•	To analyse the performance of jet propulsion system.				
•	To analyse the performance of space propulsion system.				
UNIT I	BASIC CONCEPTS				9
Energy and momentum equations of compressible fluid flows – Stagnation states, Mach waves and Mach cone – Effect of Mach number on compressibility – Isentropic flow through variable ducts – Nozzle and Diffusers.					
UNIT II	FLOW THROUGH DUCTS				9
Flows through constant area ducts with heat transfer (Rayleigh flow) and Friction (Fanno flow) – Variation of flow properties.					
UNIT III	NORMAL AND OBLIQUE SHOCKS				9
Governing equations – Variation of flow parameters across the normal and oblique shocks – Prandtl –Meyer relations – Applications.					
UNIT IV	JET PROPULSION				9
Theory of jet propulsion – Thrust equation – Thrust power and propulsive efficiency – Operating principle, cycle analysis and use of stagnation state performance of ram jet, turbojet, turbofan and Turbo prop engines – Applications of jet propulsion.					
UNIT V	SPACE PROPULSION				9
Types of rocket engines – Propellants-feeding systems – Ignition and combustion – Theory of rocket propulsion – Performance study – Staging – Terminal and characteristic velocity – Applications – space flights.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Explain the basic concepts of compressible flow and jet propulsion.				
2.	Solve problems of Rayleigh and Fanno flow.				
3.	Apply the concept of normal and oblique shocks for various applications.				
4.	Apply the concept of jet propulsion in turbojet, turbofan and turboprop engines.				
5.	Analyse the concept of space propulsion of rockets.

18MPE012	PROCESS PLANNING AND COST ESTIMATION		L	T	P	C
			3	0	0	3
OBJECTIVES:						
•	To help the students to understand the method of process planning.					
•	To explore various process planning activities.					
•	To learn importance of costing and estimation and different types of estimates.					
•	To evaluate production cost estimation of different types of shops.					
•	To calculate machining time for different machining processes.					
UNIT I	INTRODUCTION TO PROCESS PLANNING					9
Introduction- methods of process planning-Drawing interpretation-Material evaluation – steps in process selection-.Production equipment and tooling selection.						
UNIT II	PROCESS PLANNING ACTIVITIES					9
Process parameters calculation for various production processes-Selection jigs and fixtures election of quality assurance methods - Set of documents for process planning-Economics of process planning- case studies. Introduction to CAPP and ERP.						
UNIT III	INTRODUCTION TO COST ESTIMATION					9
Importance of costing and estimation –methods of costing-elements of cost estimation –Types of estimates – Estimating procedure- Estimation labor cost, material cost- allocation of overhead charges- Calculation of depreciation cost.						
UNIT IV	PRODUCTION COST ESTIMATION					9
Estimation of Different Types of Jobs - Estimation of Forging Shop, Estimation of Welding Shop, Estimation of Foundry Shop.						
UNIT V	MACHINING TIME CALCULATION					9
Estimation of Machining Time - Importance of Machine Time Calculation- Calculation of Machining Time for Different Lathe Operations ,Drilling and Boring - Machining Time Calculation for Milling, Shaping and Planning -Machining Time Calculation for Grinding.						
						TOTAL : 45 PERIODS
OUTCOMES: On completion of this course, students will be able to						
1	Select the process, equipment and tools for various industrial products.					
2	Prepare process planning activity chart.					
3	Explain the concept of cost estimation.					
4	Compute the job order cost for different type of shop floor.					
5	Calculate the machining time for various machining operations.

18MPE013	LEAN MANUFACTURING		L	T	P	C
			3	0	0	3
OBJECTIVES:						
•	To make the students to study the concept and implementation of lean manufacturing.					
•	To learn the Sustainable engineering concepts.					
•	To analyse the multi attributes decision making methods					
•	To understand the concept of lean manufacturing management.					
•	To explore the applications in lean manufacturing.					
UNIT I	INTRODUCTION					9
Objectives of lean manufacturing-key principles and implications of lean manufacturing traditional vs. lean manufacturing – Lean benefits.						
UNIT II	LEAN MANUFACTURING CONCEPTS					9
Value creation and waste elimination- Major kinds of waste- pull production – different models of pull production-continuous flow – Kaizen – Worker involvement; Part family- Production flow analysis – Composite part concept – Machine cell design -Case studies.						
UNIT III	LEAN MANUFACTURING TOOLS & METHODOLOGIES					9
Standard work -communication of standard work to employees -standard work and flexibility - visual controls-quality at the source- 5S principles –preventive maintenance-total quality management-total productive maintenance -changeover/setup time -batch size reduction.						
UNIT IV	VALUE STREAM MAPPING					9
The <i>as-is</i> diagram-the future state map-application to the factory simulation scenario-line balancing -poke yoka- Kanban – overall equipment effectiveness -JIT - elements of JIT -Kanban system.						
UNIT V	IMPLEMENTING LEAN					9
Road map-Senior management Involvement-best practices- reconciling lean with other systems - Toyota production system-lean six sigma-lean and ERP-lean with ISO9001:2000.						
					TOTAL : 45 PERIODS	
OUTCOMES:	On completion of this course, students will be able to					
1.	Evaluate the objectives and benefits of lean manufacturing.					
2.	Understand various lean manufacturing concepts with case studies.					
3.	Learn various lean manufacturing tools and methodologies.					
4.	Analyse about value stream mapping techniques.					
5.	Learn the best practices used for implementation of lean manufacturing system.

18MPE014	DESIGN OF JIGS, FIXTURES AND PRESS TOOLS	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To help the students explore the various locating and clamping methods.				
•	To design and development of jigs and fixtures for given component.				
•	To understand press working terminologies and elements of cutting dies.				
•	To design bending and drawing dies.				
•	To understand the functions and design principles of various forming techniques like bending, forming, drawing, etc.				
UNIT I	LOCATING AND CLAMPING PRINCIPLES	9			
Objectives of tool design- Function and advantages of Jigs and fixtures – Basic elements – principles of location – Locating methods and devices – Redundant Location – Principles of clamping –Mechanical actuation – pneumatic and hydraulic actuation - Standard parts – Drill bushes and Jig buttons – Tolerances and materials used.					
UNIT II	JIGS AND FIXTURES	9			
Design and development of jigs and fixtures for given component- Types of Jigs – Post, Turnover, Channel, latch, box, pot, angular post jigs – Indexing jigs – General principles of milling, Lathe, boring, broaching and grinding fixtures – Assembly, Inspection and Welding fixtures – Modular fixturing systems- Quick change fixtures.					
UNIT III	PRESS WORKING TERMINOLOGIES AND ELEMENTS OF CUTTING DIES	9			
Press Working Terminologies - operations – Types of presses – press accessories – Computation of press capacity – Strip layout – Material Utilization – Shearing action – Clearances – Press Work Materials – Center of pressure- Design of various elements of dies – Die Block – Punch holder, Die set, guide plates – Stops – Strippers – Pilots – Selection of Standard parts – Design and preparation of four standard views of simple blanking, piercing, compound and progressive dies.					
UNIT IV	BENDING AND DRAWING DIES	9			
Difference between bending and drawing – Blank development for above operations – Types of Bending dies – Press capacity – Spring back – knockouts – direct and indirect – pressure pads – Ejectors – Variables affecting Metal flow in drawing operations – draw die inserts – draw beads-ironing– Design and development of bending, forming, drawing, reverse redrawing and combination dies – Blank development for axi-symmetric, rectangular and elliptic parts – Single and double action dies.					
UNIT V	OTHER FORMING TECHNIQUES	9			
Bulging, Swaging, Embossing, coining, curling, hole flanging, shaving and sizing, assembly, fine blanking dies – recent trends in tool design- computer Aids for sheet metal forming Analysis – basic introduction - tooling for numerically controlled machines- setup reduction for work holding – Single minute exchange of dies – Poka Yoke.					

													TOTAL : 45 PERIODS		
OUTCOMES: On completion of this course, students will be able to															
1.	Explore various locating and clamping principles.														
2.	Understand functions and design of Jigs & Fixtures.														
3.	Analyze functions and design Press work and cutting die.														
4.	Evaluate functions and design of press working and elements of cutting dies.														
5.	Apply functions and various design to other forming techniques.														
TEXT BOOKS:

18MPE015	MECHANICAL VIBRATIONS	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To make the students to understand different types of vibration.				
•	To make them to understand the sources of vibration and noise in automobiles.				
•	To make design modifications to reduce the vibration and noise and improve the life of the components.				
•	To analyze the Single Degree, Two Degree and Multi degree of Freedom Systems.				
•	To study the numerical methods for vibration analysis.				
UNIT I	BASICS OF VIBRATION	9			
Introduction, classification of vibration: free and forced vibration, undamped and damped vibration, linear and nonlinear vibration, response of damped and undamped systems under harmonic force, analysis of single degree and two degree of freedom systems, torsional vibration, determination of natural frequencies.					
UNIT II	BASICS OF NOISE	9			
Introduction, amplitude, frequency, wavelength and sound pressure level, addition, subtraction and averaging decibel levels, noise dose level, legislation, measurement and analysis of noise, measurement environment, equipment, frequency analysis, tracking analysis, sound quality analysis.					
UNIT III	AUTOMOTIVE NOISE SOURCES	9			
Noise Characteristics of engines, engine overall noise levels, assessment of combustion noise and assessment of mechanical noise, engine radiated noise, intake and exhaust noise, engine necessary contributed noise, transmission noise, aerodynamic noise, tire noise, brake noise.					
UNIT IV	CONTROL TECHNIQUES	9			
Vibration isolation, tuned absorbers, un-tuned viscous dampers, damping treatments, application dynamic forces generated by IC engines, engine isolation, crank shaft damping, modal analysis of the mass elastic model shock absorbers.					
UNIT V	SOURCE OF NOISE AND CONTROL	9			
Methods for control of engine noise, combustion noise, mechanical noise, predictive analysis, palliative treatments and enclosures, automotive noise control principles, sound in enclosures, sound energy absorption, and sound transmission through barriers.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Understand causes, source and types of vibrations in machineries.				
2.	Gaining knowledge in basics and measurement of noise.				
3.	Design and develop vibrations and noise control systems.				
4.	Know about the various control techniques of dampers and shock absorbers.				

5.	Learn about various sources of noises and its control.

18MPE016	PRINCIPLES OF MANAGEMENT	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To help the students to understand the basics of management and organizations.				
•	To get knowledge on various planning techniques.				
•	To explore various organising methods.				
•	To Familiarise different directing techniques.				
•	To Learn and differentiate various types of controlling techniques.				
UNIT I	INTRODUCTION TO MANAGEMENT AND ORGANIZATIONS				9
Definition of Management – Science or Art – Manager vs Entrepreneur - types of managers - managerial roles and skills – Evolution of Management – Scientific, human relations , system and contingency approaches – Types of Business organization - Sole proprietorship, partnership, company-public and private sector enterprises - Organization culture and Environment – Current trends and issues in Management.					
UNIT II	PLANNING				9
Nature and purpose of planning – planning process – types of planning – objectives – setting objectives – policies – Planning premises – Strategic Management – Planning Tools and Techniques – Decision making steps and process.					
UNIT III	ORGANISING				9
Nature and purpose – Formal and informal organization – organization chart – organization structure – types – Line and staff authority – departmentalization – delegation of authority – centralization and decentralization – Job Design - Human Resource Management – HR Planning, Recruitment, selection, Training and Development, Performance Management , Career planning and management.					
UNIT IV	DIRECTING				9
Foundations of individual and group behaviour – motivation – motivation theories – motivational techniques – job satisfaction – job enrichment – leadership – types and theories of leadership – communication – process of communication – barrier in communication – effective communication – communication and IT.					
UNIT V	CONTROLLING				9
System and process of controlling – budgetary and non-budgetary control techniques – use of computers and IT in Management control – Productivity problems and management – control and performance – direct and preventive control – reporting.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Understand the basics of management and organizations.				
2.	Identify the nature and purpose of planning and to get knowledge on various planning				

	techniques.
3.	Learn and implement various organising methods.
4.	Gain knowledge on different directing techniques.
5.	Analyse and learn various types of controlling techniques.

18MPE017	AUTOMOBILE ENGINEERING		L	T	P	C
			3	0	0	3
OBJECTIVES:						
•	To understand the construction and working principle of various parts of an automobile.					
•	To understand assembling and dismantling of engine parts and transmission system.					
•	To broaden the understanding of automotive architecture and performance.					
•	To introduce students about the transmission system.					
•	To familiarize about the wheels, tyres, and braking system.					
UNIT I	VEHICLE STRUCTURE AND ENGINES					9
Types of automobiles, vehicle construction and different layouts, chassis, frame and body, Vehicle aerodynamics (various resistances and moments involved), IC engines –components functions and materials, variable valve timing (VVT).						
UNIT II	ENGINE AUXILIARY SYSTEMS					9
Electronically controlled gasoline injection system for SI engines, Electronically controlled diesel injection system (Unit injector system, Rotary distributor type and common rail direct injection system), Electronic ignition system (Transistorized coil ignition system, capacitive discharge ignition system), Turbo chargers (WGT, VGT), Engine emission control by threeway catalytic converter system, Emission norms (Euro and BS).						
UNIT III	TRANSMISSION SYSTEMS					9
Clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms, Over drive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints, Differential and rear axle, Hotchkiss Drive and Torque Tube Drive.						
UNIT IV	STEERING, BRAKES AND SUSPENSION SYSTEMS					9
Steering geometry and types of steering gear box-Power Steering, Types of Front Axle, Types of Suspension Systems, Pneumatic and Hydraulic Braking Systems, Antilock Braking System (ABS), electronic brake force distribution (EBD) and Traction Control.						
UNIT V	ALTERNATIVE ENERGY SOURCES					9
Use of Natural Gas, Liquefied Petroleum Gas, Bio-diesel, Bio-ethanol, Gasohol and Hydrogen in Automobiles- Engine modifications required –Performance, Combustion and Emission Characteristics of SI and CI engines with these alternate fuels - Electric and Hybrid Vehicles, Fuel Cell Note: Practical Training in dismantling and assembling of Engine parts and Transmission Systems should be given to the students.						
					TOTAL : 45 PERIODS	
OUTCOMES:	On completion of this course, students will be able to					
1.	Identify the different components in vehicle structures and engines.					
2.	Evaluating the various engine auxiliary systems.					
3.	Understand components of transmission systems.					

4.	Learn the functions of steering, suspension and braking systems.
5.	Analyse performance, combustion and emission characteristics of alternative fuels.

18MPE018	ENERGY CONSERVARION AND MANAGEMENT		L	T	P	C
			3	0	0	3
OBJECTIVES:						
•	To enable the students to understand the basic concepts of Energy Engineering and Management.					
•	To carryout energy accounting and balancing.					
•	To conduct energy audit and suggest methodologies for energy savings.					
•	To utilise the available resources in optimal ways.					
•	To understand and analyse the energy data of industries.					
UNIT I	INTRODUCTION					9
Energy - Power – Past & Present scenario of World; National Energy consumption Data – Environmental aspects associated with energy utilization – Energy Auditing: Need, Types, Methodology and Barriers. Role of Energy Managers. Instruments for energy auditing.						
UNIT II	ELECTRICAL SYSTEMS					9
Components of EB billing – HT and LT supply, Transformers, Cable Sizing, Concept of Capacitors, Power Factor Improvement, Harmonics, Electric Motors - Motor Efficiency Computation, Energy Efficient Motors, Illumination – Lux, Lumens, Types of lighting, Efficacy, LED Lighting and scope of Energy conservation(encon.) in Illumination.						
UNIT III	THERMAL SYSTEMS					9
Stoichiometry, Boilers, Furnaces and Thermic Fluid Heaters – Efficiency computation and encon measures. Steam: Distribution & Usage: Steam Traps, Condensate Recovery, Flash Steam Utilization, Insulators & Refractories.						
UNIT IV	ENERGY CONSERVATION IN MAJOR UTILITIES					9
Pumps, Fans, Blowers, Compressed Air Systems, Refrigeration and Air Conditioning Systems – Cooling Towers – D.G. sets.						
UNIT V	ENERGY ECONOMICS					9
Energy Economics – Discount Rate, Payback Period, Internal Rate of Return, Net Present Value, Life Cycle Costing – ESCO concept.						
					TOTAL : 45 PERIODS	
OUTCOMES:	On completion of this course, students will be able to					
1.	Apply the energy utilization at national and international levels.					
2.	Analyze various energy conservation techniques in electrical systems.					
3.	Learn various energy conservation techniques in Thermal systems.					
4.	Create various energy conservation techniques in major utilities.					
5.	Understand the economics of energy.

18MPE019	INDUSTRIAL ROBOTICS	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To make the students to understand the basic concepts of robotics.				
•	To learn the concepts and techniques of robot manipulator and its kinematics.				
•	To learn the various end effectors and sensors.				
•	To understand the Robots cell design and programming.				
•	To explore the industrial applications of robot.				
UNIT I	FUNDAMENTALS OF ROBOT				9
Robot - Definition - Robot Anatomy - Coordinate Systems, Work Envelope, Types and Classification-Specifications-Pitch, Yaw, Roll, Joint notations, Speed of Motion, Pay Load- Robot Parts and their Functions-Need for Robots-Different Applications.					
UNIT II	ROBOT DRIVE SYSTEMS AND END EFFECTORS				9
Pneumatic Drives-Hydraulic Drives-Mechanical Drives-Electrical Drives-D.C. Servo Motors, Stepper Motors, A.C. Servo Motors-Salient Features, Applications and Comparison of all these Drives, End Effectors – Grippers-Mechanical Grippers, Pneumatic and Hydraulic Grippers, Magnetic Grippers, Vacuum Grippers; Two Fingered and Three Fingered Grippers; Internal Grippers and External Grippers; Selection and Design Considerations.					
UNIT III	SENSORS AND MACHINE VISION				9
Requirements of a sensor, Principles and Applications of the following types of sensors- Position sensors – Piezo-electric Sensor, LVDT, Resolvers, Optical Encoders, pneumatic Position Sensors, Range Sensors, Triangulations Principles, Structured, Lighting Approach, Time of Flight, Range Finders, Laser Range Meters, Touch Sensors, Binary Sensors, Analog Sensors, Wrist Sensors, Compliance Sensors, Slip Sensors, Camera, Frame Grabber, Sensing and Digitizing Image Data-Signal Conversion, Image Storage, Lighting Techniques, Image Processing and Analysis-Data Reduction, Segmentation, Feature Extraction, Object Recognition, Other Algorithms, Applications-Inspection, Identification, Visual Serving and Navigation.					
UNIT IV	ROBOT KINEMATICS AND ROBOT PROGRAMMING				9
Forward Kinematics, Inverse Kinematics and Difference; Forward Kinematics and Reverse Kinematics of manipulators with Two, Three Degrees of Freedom (in 2 D), Four Degrees of freedom (in 3D) Jacobians, Velocity and Forces-Manipulator Dynamics, Trajectory Generator, Manipulator Mechanism Design-Derivations and problems. Lead through Programming, Robot programming Languages-VAL Programming-Motion Commands, Sensor Commands, End effector commands and simple Programs.					
UNIT V	IMPLEMENTATION AND ROBOT ECONOMICS				9
RGV, AGV, Implementation of Robots in Industries-Variou Steps, Safety Considerations for Robot Operations - Economic Analysis of Robots.					
					TOTAL : 45 PERIODS
OUTCOMES: On completion of this course, students will be able to					

1.	On completion of this course, students will be able to analysing fundamentals of robotics.
2.	Understand the design concepts of robot drives and end effectors.
3.	Apply the concept of sensors and machine vision system.
4.	Learn the concept of Robot kinematics and write robot programming.
5.	Evaluate the safety and economics of robots.

18MPE020	COMPUTATIONAL FLUID DYNAMICS	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To make the students understand the Governing Equations and boundary conditions of various fluid dynamic problems.				
•	To introduce numerical modelling and its role in the field of fluid flow and heat transfer.				
•	To enable the students to understand the various discretization methods, solution procedures and turbulence modelling.				
•	To apply finite volume method for convection and diffusion problems.				
•	To analyse the finite volume approach to discretize the governing equations				
UNIT I	GOVERNING EQUATIONS AND BOUNDARY CONDITIONS				9
Basics of computational fluid dynamics – Governing equations of fluid dynamics – Continuity, Momentum and Energy equations – Chemical species transport – Physical boundary conditions – Time-averaged equations for Turbulent Flow – Turbulent–Kinetic Energy Equations – Mathematical behavior of PDEs on CFD - Elliptic, Parabolic and Hyperbolic equations.					
UNIT II	FINITE DIFFERENCE AND FINITE VOLUME METHODS FOR DIFFUSION				9
Derivation of finite difference equations – Simple Methods – General Methods for first and second order accuracy – Finite volume formulation for steady state One, Two and Three –dimensional diffusion problems –Parabolic equations – Explicit and Implicit schemes – Example problems onelliptic and parabolic equations – Use of Finite Difference and Finite Volume methods.					
UNIT III	FINITE VOLUME METHOD FOR CONVECTION AND DIFFUSION				9
Steady one-dimensional convection and diffusion – Central, upwind differencing schemes properties of discretization schemes – Conservativeness, Boundedness, Transportiveness, Hybrid, Power-law, QUICK Schemes.					
UNIT IV	FLOW FIELD ANALYSIS				9
Finite volume methods -Representation of the pressure gradient term and continuity equation – Staggered grid – Momentum equations – Pressure and Velocity corrections – Pressure Correction equation, SIMPLE algorithm and its variants – PISO Algorithms.					
UNIT V	TURBULENCE MODELS AND MESH GENERATION				9
Turbulence models, mixing length model, Two equation (k- ϵ) models – High and low Reynolds number models – Structured Grid generation – Unstructured Grid generation – Mesh refinement – Adaptive mesh – Software tools.					
					TOTAL : 45 PERIODS
OUTCOMES: On completion of this course, students will be able to					
1.	On completion of this course, students will be able toDerive governing equations of fluid				

	dynamics by applying different boundary conditions.														
2.	Understand finite difference and volume methods for diffusion.														
3.	Apply finite volume method to solve convection diffusion problems.														
4.	Learn the concept of flow field analysis.														
5.	Creating different turbulence models and grid generation.

18MPE021	DESIGN FOR MANUFACTURE, ASSEMBLY AND ENVIRONMENTS	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To make the students to study the various factors influencing the manufacturability of components and the use of tolerances in manufacturing.				
•	To discover the application of this study to various forging, casting, welding and machining Processes.				
•	To help the students to design features to facilitate machining.				
•	To make the students to design features to facilitate casting.				
•	To help the students to design the components by considering environmental factors.				
UNIT I	DESIGN PRINCIPLES FOR MANUFACTURABILITY	9			
General design principles for manufacturability – strength and mechanical factors, mechanisms selection, evaluation method, process capability – feature tolerances–geometric tolerances – assembly limits –datum features – tolerance stacks.					
UNIT II	FACTORS INFLUENCING FORM DESIGN	9			
Working principle, material, manufacture, design- possible solutions - materials choice -influence of materials on form design - form design of welded members, forgings andcastings.					
UNIT III	COMPONENT DESIGN - MACHINING	9			
Design features to facilitate machining - drills - milling cutters - keyways – doweling procedures, counter sunk screws - reduction of machined area- simplification by separation - simplification by amalgamation - design for machinability - design foreconomy - design for clampability - design for accessibility - Design for assembly – Product design for manual assembly - Product design for automatic assembly – Robotic assembly.					
UNIT IV	COMPONENT DESIGN - CASTING	9			
Redesign of castings based on parting line considerations - minimizing core requirements, machined holes, redesign of cast members to obviate cores. Identification ofuneconomical design - modifying the design - group technology.					
UNIT V	DESIGN FOR ENVIRONMENT	9			
Introduction – environmental objectives – global issues – regional and local issues – basic DFE methods – design guidelines – lifecycle assessment method – techniques to reduce environmental impact –design for energy efficiency – design to regulations andstandards. Introduction to Green manufacturing.					
					TOTAL : 45 PERIODS
OUTCOMES: On completion of this course, students will be able to					
1.	On completion of this course, students will be able to learn different principles of design for manufacture.				
2.	Understand the various factors which are influencing the form design.				

3.	Analyzing design for different aspects.
4.	Understand the components design involved in casting.
5.	Creating the components which are best suited for environment.

18MPE022	NANOTECHNOLOGY			L	T	P	C
				3	0	0	3
OBJECTIVES							
•	To make the students to understand fundamental principles of nanomaterials.						
•	To understand various properties of nanomaterials.						
•	To familiarise the characterisation techniques of nanomaterials.						
•	To gain knowledge on various fabrication techniques.						
•	To explore various applications of nanomaterials.						
UNIT I	FUNDAMENTAL PRINCIPLES						9
Definition, classification of functional nano materials - size and scale - units, scaling laws, atoms, molecules and clusters, supra molecules – nano scale phenomena - tunneling, chemical bonds, intermolecular forces, molecular and crystalline structure, hierarchical structures and functionalities - surfaces and interfaces, bulk to surface transition, self-assembly and surface reconstruction.							
UNIT II	PROPERTIES OF NANOMATERIALS						9
Size dependence of properties - phenomena and properties of nanoscale - brief introduction to calculation approaches -mechanical / frictional properties, optical properties, electrical transport, magnetic properties.							
UNIT III	NANOMATERIAL CHARACTERISATION						9
Principle, equipment, operation of Scanning electron microscopy, electron probe microscope, transmission electron microscopy, Auger electron spectroscopy, , x-ray spectroscopy.							
UNIT IV	SYNTHESIS OF NANOMATERIALS						9
Fabrication techniques: self-assembly, self-replication, sol - gels, Langmuir - Blodgett thin films, nano lithography – bio inspired synthesis, micro fluidic processes, chemical vapour deposition metals: colloidal gold, silver and metal clusters - semiconductors: cadmium sulphide, silicon - fullerenes / carbon nanotubes, nanocomposites, nanoporous materials, biological materials.							
UNIT V	APPLICATIONS OF NANOMATERIALS						9
Nano electronics - nano sensors - environmental - biological - energy storage and fuel cells – energy and environment, heating and medical.							
						TOTAL : 45 PERIODS	
OUTCOMES:	On completion of this course, students will be able to						
1.	Understand the fundamental principles of nanomaterials.						
2.	Learn various properties of nanomaterials.						
3.	Get knowledge on characterisation techniques of nanomaterials.						
4.	Explore various fabrication techniques						
5.	Get knowledge various applications of nanomaterials.

18MPE023	TOTAL QUALITY MANAGEMENT	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To facilitate the understanding of quality management principles and process.				
•	To understand needs of various TQM principles.				
•	To acquire knowledge on TQM tools and techniques.				
•	To implement and assure Quality in Management.				
•	To acquire knowledge about various quality standards				
UNIT I	INTRODUCTION				9
Introduction - Need for quality - Evolution of quality - Definitions of quality - Dimensions of product and service quality - Basic concepts of TQM - TQM Framework - Contributions of Deming, Juran and Crosby - Barriers to TQM - Quality statements - Customer focus - Customer orientation, Customer satisfaction, Customer complaints, and Customer retention - Costs of quality.					
UNIT II	TQM PRINCIPLES				9
Leadership - Strategic quality planning, Quality Councils - Employee involvement - Motivation, Empowerment, Team and Teamwork, Quality circles Recognition and Reward, Performance appraisal- Continuous process improvement - PDCA cycle, 5S, Kaizen - Supplier partnership - Partnering,Supplier selection, Supplier Rating.					
UNIT III	TQM TOOLS AND TECHNIQUES I				9
The seven traditional tools of quality - New management tools - Six sigma: Concepts, Methodology, applications to manufacturing, service sector including IT - Bench marking - Reason to bench mark, Bench marking process - FMEA - Stages, Types.					
UNIT IV	TQM TOOLS AND TECHNIQUES II				9
Control Charts - Process Capability - Concepts of Six Sigma - Quality Function Development (QFD) -Taguchi quality loss function - Total Productive Maintenance (TPM) - Concepts, improvement needs - Performance measures -TQM and TPM similarities.					
UNIT V	QUALITY SYSTEMS				9
Need for ISO 9000 - ISO 9001-2008 Quality System - Elements, Documentation, Quality Auditing -QS 9000 - ISO 14000 - Concepts, Requirements and Benefits - TQM Implementation in manufacturing and service sectors.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Understand the various philosophies of TQM.				
2.	Learn the various types TQM principles.				
3.	Analyse the quality of seven tools and types of FMEA.				
4.	Evaluate about control chart, TPM and QFD.				

5.	Understand the international standards and TQM implementation.

18MPE024	OPTIMIZATION TECHNIQUES	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To make the students to know the various unconstrained optimization techniques.				
•	To familiarise the constrained optimization techniques.				
•	To impart knowledge on advanced optimization techniques.				
•	To design various static applications.				
•	To explore different dynamic applications.				
UNIT I	UNCONSTRAINED OPTIMIZATION TECHNIQUES	9			
Introduction to optimum design - General principles of optimization – Problem formulation & their classifications - Single variable and multivariable optimization, Techniques of unconstrained minimization – Golden section, Random, pattern and gradient search methods – Interpolation methods.					
UNIT II	CONSTRAINED OPTIMIZATION TECHNIQUES	9			
Optimization with equality and inequality constraints - Direct methods – Indirect methods using penalty functions, Lagrange multipliers - Geometric programming.					
UNIT III	ADVANCE OPTIMIZATION TECHNIQUES	9			
Multi stage optimization – dynamic programming; stochastic programming; Multi objective optimization, Genetic algorithms and Simulated Annealing techniques; Neural network & Fuzzy logic principles in optimization.					
UNIT IV	STATIC APPLICATIONS	9			
Structural applications – Design of simple truss members - Design applications – Design of simple axial, transverse loaded members for minimum cost, weight – Design of shafts and torsional Loaded members – Design of springs.					
UNIT V	DYNAMIC APPICATIONS	9			
Dynamic Applications – Optimum design of single, two degree of freedom systems, vibration absorbers. Application in Mechanisms – Optimum design of simple linkage mechanisms.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Compare different unconstrained optimization techniques.				
2.	Learn the constrained optimization techniques.				
3.	Gain knowledge about advanced optimization techniques.				
4.	Design and analyse various static applications.				
5.	Design and analyse various dynamic applications.

18MOE001	ENGINEERING ECONOMICS	L	T	P	C
		3	0	0	3
OBJECTIVES					
•	To make the students to understand the fundamental economic concepts.				
•	To acquire basic knowledge on value engineering.				
•	To learn the different cash flow techniques.				
•	To acquire basic knowledge on different types of replacement and maintenance analysis.				
•	To learn the different depreciation methods.				
UNIT I	INTRODUCTION TO ECONOMICS				9
Introduction to Economics- Flow in an economy, Law of supply and demand, Concept of Engineering Economics – Engineering efficiency, Economic efficiency, Scope of engineering economics – Element of costs, Marginal cost, Marginal Revenue, Sunk cost, Opportunity cost, Break-even analysis - V ratio, Elementary economic Analysis – Material selection for product Design selection for a product, Process planning.					
UNIT II	VALUE ENGINEERING				9
Make or buy decision, Value engineering – Function, aims, Value engineering procedure. Interest formulae and their applications –Time value of money, Single payment compound amount factor, Single payment present worth factor, Equal payment series sinking fund factor, Equal payment series payment Present worth factor- equal payment series capital recovery factor - Uniform gradient series annual equivalent factor, Effective interest rate, Examples in all the methods.					
UNIT III	CASH FLOW				9
Methods of comparison of alternatives – present worth method (Revenue dominated cash flow diagram), Future worth method (Revenue dominated cash flow diagram, cost dominated cash flow diagram), Annual equivalent method (Revenue dominated cash flow diagram, cost dominated cash flow diagram), rate of return method, Examples in all the methods.					
UNIT IV	REPLACEMENT AND MAINTENANCE ANALYSIS				9
Replacement and Maintenance analysis – Types of maintenance, types of replacement problem, determination of economic life of an asset, Replacement of an asset with a new asset – capital recovery with return and concept of challenger and defender, Simple probabilistic model for items which fail completely.					
UNIT V	DEPRECIATION				9
Depreciation- Introduction, Straight line method of depreciation, declining balance method of depreciation-Sum of the years digits method of depreciation, sinking fund method of depreciation / Annuity method of depreciation, service output method of depreciation.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Explore the different engineering economic principles.				

2.	Explain the concept of time value of money
3.	Understand concept of cash flow.
4.	Understand the type of replacement and maintenance analysis.
5.	Decide when to replace an asset and understand the concept of depreciation.

18MOE002	INDUSTRIAL ENGINEERING	L	T	P	C
		3	0	0	3
OBJECTIVES:					
●	To explain about various production system and various layouts.				
●	To explain and provides knowledge on Process Planning and Control.				
●	To discuss on various types of work study and work measurement.				
●	To discuss on various Inventory control techniques and material handling techniques.				
●	To explain the concept of system analysis and maintenance.				
UNIT I	PRODUCTION SYSTEM	9			
Industrial engineering - Concept, History and development, Applications, Roles of Industrial engineer. Production management, Industrial engineering versus production management, Operations Management. Production system – Analysis, Input output model, Productivity, Factors affecting productivity. Plant layout, Process layout, Product layout, Combination layout, fixed position layout, Flow pattern, and Workstation design					
UNIT II	PROCESS PLANNING AND CONTROL	9			
Process planning – definition, procedure, Process selection, Machine capacity, process sheet, process analysis, process chart – symbols, outline process chart, flow process chart. Group technology – functional and group layout, classification and coding system, formation of component family. Production planning, economic batch quantity, loading, scheduling. Production control – dispatching, routing. Progress control – bar, curve, gantt chart, route & schedule chart, line of balance					
UNIT III	WORK STUDY	9			
Work study – definition, need, advantages, objectives of method study and work measurement, method study procedure, flow diagram, string diagram, multiple activity chart, operation analysis, analysis of motion, principles of motion economy, design of work place layout & ergonomics, therbligs, SIMO chart, stop watch procedure, micro & macro motion study. Predetermined motion time system, work sampling – principle, procedure.					
UNIT IV	INVENTORY MANAGEMENT	9			
Inventory – control, classification, management, objectives, functions. Economic order quantity, inventory models, ABC analysis, Material Requirement Planning(MRPI), Manufacturing Resource Planning(MRP II), Operating cycle, Just in Time manufacturing system, KANBAN technique, lean manufacturing, Supply chain management. Material handling – functions, principles, Engineering and economic factors, Material handling equipment – selection, maintenance, types.					
UNIT V	SYSTEM ANALYSIS AND MAINTENANCE	9			
System concept - system analysis, systems engineering, techniques, applications. Value analysis – aim, technique, procedure, advantages, value engineering, value control, types of values. Re-engineering, Business process re-engineering. Plant maintenance – objectives, importance, maintenance engineer – duties, functions and responsibilities. Types – breakdown, scheduled, preventive, predictive.					
					TOTAL : 45 PERIODS

OUTCOMES:	On completion of this course, students will be able to
1.	Design of Plant layout and material handling system.
2.	Prepare production planning and control activities such as work study, product planning, production scheduling, Inventory Control.
3.	Explain the ergonomics of manufacturing.
4.	Define the productivity management system and inventory management.
5.	Understand the system analysis and maintenance.

18MOE003	ENTREPRENEURSHIP DEVELOPMENT	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To develop and strengthen entrepreneurial quality and motivation in students.				
•	To impart basic entrepreneurial skills and understanding to run a business efficiently.				
•	To understand the various business world.				
•	To acquire the knowledge of finance and accounting.				
•	To understand the growth Strategies in small industry.				
UNIT I	ENTREPRENEURSHIP				9
Entrepreneur – Types of Entrepreneurs – Difference between Entrepreneur and entrepreneur Entrepreneurship in Economic Growth, Factors Affecting Entrepreneurial Growth.					
UNIT II	MOTIVATION				9
Major motives influencing an Entrepreneur – Achievement motivation training, Self-rating, Business games, Thematic apperception Test – Stress Management, Entrepreneurship Development Programs – Need, Objectives.					
UNIT III	BUSINESS				9
Small Enterprises – Definition, Classification – Characteristics, Ownership Structures – Project Formulation – Steps involved in setting up a Business – identifying, selecting a Good Business opportunity, Market Survey and Research, Techno-economic Feasibility Assessment – Preparation of Preliminary Project Reports – Project Appraisal – Sources of Information – Classification of Needs and Agencies.					
UNIT IV	FINANCING AND ACCOUNTING				9
Need – Sources of Finance, Term Loans, Capital Structure, Financial Institution, and Management of working Capital, Costing, Break Even Analysis, and Taxation – Income Tax, Excise Duty – Sales Tax, GST.					
UNIT V	SUPPORT TO ENTREPRENEURS				9
Sickness in small Business – Concept, Magnitude, Causes and Consequences, Corrective Measures - Business Incubators – Government Policy for Small Scale Enterprises – Growth Strategies in small industry – Expansion, Diversification, Joint Venture, Merger and Sub Contracting.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Gain knowledge and skills needed to run a business successfully.				
2.	Apply motivation concept in all types of business.				
3.	Analyse the business strategies.				
4.	Know the cost analysis and various taxation systems.				
5.	Learn the government policies for small enterprises.

18MOE004	ELEMENTS OF PROJECT MANAGEMENT	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To enable the students to have overall view of project management techniques.				
•	To introduce students to project definition, management techniques, planning and scheduling.				
•	To understand the commercial aspects of projects.				
•	To apply project management principles in business situations to optimize resource utilization.				
•	To apply project management principles to time optimization.				
UNIT I	PROJECT MANAGEMENT DEFINITIONS				9
Project Management – Definition –Goal - Lifecycles. Project Selection Methods. Project Portfolio Process – Project Formulation. Project Manager – Roles- Responsibilities and Selection – Project Teams.					
UNIT II	PLANNING AND BUDGETING				9
The Planning Process – Work Break down Structure – Role of Multidisciplinary teams. Budget the Project – Methods. Cost Estimating and Improvement. Budget uncertainty and risk management.					
UNIT III	SCHEDULING & RESOURCE ALLOCATION				9
PERT & CPM Networks - Crashing – Project Uncertainty and Risk Management – Simulation – Gantt Charts – Expediting a project – Resource loading and levelling. Allocating scarce resources - Goldratt's Critical Chain.					
UNIT IV	CONTROL AND COMPLETION				9
The Plan-Monitor-Control cycle – Data Collecting and reporting – Project Control – Designing the control system. Project Evaluation, Auditing and Termination.					
UNIT V	PROJECT ORGANISATION & CONFLICT MANAGEMENT				9
Formal Organisation Structure – Organisation Design – Types of project organizations. Conflict – Origin & Consequences. Managing conflict – Team methods for resolving conflict.					
					TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to				
1.	Demonstrate the core philosophy of project management.				
2.	Explain concepts of planning, budgeting, scheduling & resource allocation.				
3.	Possess the knowledge of project management techniques.				
4.	Apply project management principles in business situations to optimize resource utilization and time optimization.				

5.	Explore commercial and legal aspects of projects.

18MOE006	NON DESTRUCTIVE TESTING AND MATERIALS	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To study and understand the various Non-Destructive Evaluation and Testing methods.				
•	To learn the theory and industrial applications of NDT.				
•	To understand the concepts of thermography, eddy current testing and surface NDT methods.				
•	To obtain the knowledge on Ultrasonic testing and Acoustic Emission.				
•	To explore the principles of radiography.				
UNIT I	OVERVIEW OF NDT				9
Non-Destructive Testing Versus Mechanical testing, Overview of NDT Methods for the detection of manufacturing defects as well as material characterisation. Relative merits and limitations, Various physical characteristics of materials and their applications in NDT – Unaided and aided visual inspection.					
UNIT II	SURFACE NDE METHODS				9
Liquid Penetrant Testing - Principles, types and properties of liquid penetrants, developers, advantages and limitations of various methods, Testing Procedure, Interpretation of results. Magnetic Particle Testing- Theory of magnetism, inspection materials Magnetisation methods, Interpretation and evaluation of test indications, Principles and methods of demagnetization, Residual magnetism.					
UNIT III	THERMOGRAPHY AND EDDY CURRENT TESTING				9
Thermography- Principles, Contact and non-contact inspection methods, Techniques for applying liquid crystals, Advantages and limitation - infrared radiation and infrared detectors, Instrumentations and methods, applications. Eddy Current Testing-Generation of eddy currents, Properties of eddy currents, Eddy current sensing elements, Probes, Instrumentation, Types of arrangement, Applications, advantages, Limitations, Interpretation/Evaluation.					
UNIT IV	ULTRASONIC TESTING AND ACOUSTIC EMISSION				9
Ultrasonic Testing-Principle, Transducers, transmission and pulse-echo method, straight beam and angle beam, instrumentation, data representation, A-Scan, B-scan, C-scan. Phased Array Ultrasound, Time of Flight Diffraction. Acoustic Emission Technique –Principle, AE parameters, Applications.					
UNIT V	RADIOGRAPHY				9
Principle, interaction of X-ray with matter, imaging, film and film less techniques, types and use of filters and screens, geometric factors, Inverse square law, characteristics of films - graininess, density, speed, contrast, characteristic curves, Penetrometers, Exposure charts, Radio graphic equivalence. Fluoroscopy- Xero-Radiography, Computed Radiography, Computed Tomography.					

		TOTAL : 45 PERIODS
OUTCOMES:	On completion of this course, students will be able to	
1.	Understanding need of Non-Destructive Testing methods.	
2.	Understanding the surface NDT methods.	
3.	Learn the principles and operation of Thermography and Eddy current testing.	
4.	Analysing the Ultrasonic testing and Acoustic Emission.	
5.	Applying the principle and operation of Radiography testing.

18MOE006	INTRIDUCTION TO AUTOMOBILE ENGINEERING		L	T	P	C
			3	0	0	3
OBJECTIVES:						
●	To understand the construction and working principle of various parts of an automobile.					
●	To understand assembling and dismantling of engine parts and transmission system.					
●	To broaden the understanding of automotive architecture and performance.					
●	To introduce students about the transmission system.					
●	To familiarize about the wheels, tires, and automotive air conditioning.					
UNIT I	VEHICLE STRUCTURE AND ENGINES					9
Types of automobiles, vehicle construction and different layouts, chassis, frame and body, Vehicle aerodynamics (various resistances and moments involved), IC engines – Types - components functions and materials - variable valve timing (VVT).						
UNIT II	ENGINE AUXILIARY SYSTEMS					9
Electronically controlled gasoline injection system for SI engines, Electronically controlled diesel injection system (Unit injector system, Rotary distributor type and common rail direct injection system), Electronic ignition system (Transistorized coil ignition system, capacitive discharge ignition system), Turbo chargers (WGT, VGT), Engine emission control by three way catalytic converter system, Emission norms (Euro and BS).						
UNIT III	TRANSMISSION SYSTEMS					9
Clutch-types and construction, gear boxes- manual and automatic, gear shift mechanisms, Over drive, transfer box, fluid flywheel, torque converter, propeller shaft, slip joints, universal joints, Differential and rear axle, Hotchkiss Drive and Torque Tube Drive.						
UNIT IV	STEERING, BRAKES AND SUSPENSION SYSTEMS					9
Steering geometry and types of steering gear box-Power Steering, Types of Front Axle, Types of Suspension Systems, Pneumatic and Hydraulic Braking Systems, Antilock Braking System (ABS), electronic brake force distribution (EBD) and Traction Control.						
UNIT V	AUTOMOTIVE AIR CONDITIONING, WHEELS, TIRES AND ALTERNATIVE ENERGY SOURCES					9
Automotive air conditioning - Wheels and tires: Wheel quality, assembly, types of wheels, wheel rims, Construction of tires and tire specifications - Alternative Energy sources: Engine modifications required –Performance, Combustion and Emission Characteristics of SI and CI engines with these alternate fuels - Electric and Hybrid Vehicles, Fuel Cell.						
					TOTAL : 45 PERIODS	
OUTCOMES: On completion of this course, students will be able to						
1.	Identify the different components in vehicle structures and engines.					

2.	Evaluating the various engine auxiliary systems.
3.	Understand components of transmission systems.
4.	Learn the functions of steering, suspension, braking systems, wheels and tires.
5.	Analysing performance, combustion and emission characteristics of alternative fuels

18MOE007	INDUSTRIAL AUTOMATION			L	T	P	C
				3	0	0	3
OBJECTIVES							
•	To make the students to understand basics of industrial automation.						
•	To explore various types of sensors and transducers.						
•	To get knowledge on electrical drives and machine vision system.						
•	To programme programmable logic controllers.						
•	To design simple mechatronics systems.						
UNIT I	INTRODUCTION TO AUTOMATION						9
Industrial Automation - General Aspects – Advantages and Limitations of Automation –Application of Automation – Elements of Automation – Aims of Automation – Mechanisation and Automation – Types of Automation – Low Cost Automation – Assembly Automation Equipment .							
UNIT II	SENSORS AND TRANSDUCERS						9
Introduction to sensors and transducers- classifications- Principle and working of Resistive, capacitive, inductive and resonant transducers- optical measurement systems-encoders, photo electric, vision sensor, Fiber optic transducers- solid state sensors and transducers-magnetic measurements, temperature measurements, Chemical measurements-piezoelectric – accelerometers - ultrasonic sensors and transducers- flow, distance, velocity measurements.							
UNIT III	ELECTRICAL DRIVES AND MACHINE VISION						9
Electromagnetic Principles, Solenoids and Relays, Electrical drives -stepper motors, servo motors. Signal processing, A/D and D/A converters – Introduction to Data acquisition system - Proportional, Integral, Derivative and PID controller – Microcontroller. Introduction to machine vision system - Camera, Frame Grabber, Sensing and Digitizing Image Data- Lighting Techniques, Image Processing and Analysis, Applications.							
UNIT IV	PROGRAMMABLE LOGIC CONTROLLERS						9
Programmable logic controller – Basic structure - Programming units - Memory – Input - Output Modules - Mnemonics – Latching- Timers – Internal relays - Counters – Shift Registers - Master and Jump Controls -Programming the PLC using Ladder diagram -Simple example of PLC application.							
UNIT V	MECHATRONICS SYSTEM DESIGN AND APPLICATION						9
Mechatronics in Engineering Design, Traditional and mechatronics design, Applications - Pick and Place robots, Car park barriers, Bar code reader, Wind screen wiper wing stepper motor control– Traffic Control interface - IOT applications – Industry 4.0. Case studies: Coin counters, Robot walking machine.							
						TOTAL : 45 PERIODS	
OUTCOMES:	On completion of this course, students will be able to						
1.	Explain the key elements of automation.						
2.	Explore the Performance of commonly used sensors and transducers.						

3.	Compare the different actuation systems, controllers and machine vision systems
4.	Understand the PLC and develop programs using ladder logic.
5.	Design the mechatronics systems for various applications.
TEXT BOOKS:	
1.	Bolton.W, “ Mechatronics ”, Addison Wesley, 4th Edition, New Delhi, 2010.

18MOE008	INTRODUCTION TO COMPOSITE MATERIALS	L	T	P	C
		3	0	0	3
OBJECTIVES:					
•	To enable the students to understand the properties and design of composite materials.				
•	To familiarize the different type of polymer matrix composites.				
•	To understand the various manufacturing techniques for metal matrix composites.				
•	To study the various manufacturing methods for ceramic matrix composites.				
•	To understand the geometrical aspects in Composite Materials.				
UNIT I	INTRODUCTION TO REINFORCEMENT AND MATRIX INTERFACE	12			
Reinforcement – Fibres – Glass fibre, Aramid fibre, Carbon fibre, boron fibre – Fabrication – Properties – Applications – Comparison of fibres – Particulate and whisker reinforcements. Matrix materials – Properties. Wettability – Effect of surface roughness – Interfacial bonding – Methods for measuring bond strength.					
UNIT II	POLYMER MATRIX COMPOSITES	8			
Types – Processing – Thermal matrix composites – Hand layup and spray technique, filament winding, Pultrusion, resin transfer moulding, autoclave moulding – Thermoplastic matrix composites – Injection moulding, film stacking – Diaphragm forming – Thermoplastic tape laying. Glass fibre/polymer interface. Mechanical properties – Fracture. Applications.					
UNIT III	METAL MATRIX COMPOSITES	8			
Types. Important metallic matrices. Processing – Solid state, liquid state, deposition, insitu. Sic fibre / Titanium interface. Mechanical properties. Applications.					
UNIT IV	CERAMIC MATRIX COMPOSITES	8			
Ceramic matrix materials – Processing – Hot pressing, liquid infiltration technique, Lanxide process, insitu chemical reaction techniques – CVD, CVI, sol-gel process. Interface in CMCs. Mechanical properties – Thermal shock resistance – Applications.					
UNIT V	GEOMETRICAL ASPECTS, FATIGUE AND CREEP IN COMPOSITE MATERIALS	9			
Unidirectional laminas – Volume fraction and weight fraction – Woven roving, in-plane random fibres – Fibre length and fibre orientation distribution – Voids – Fibre orientation during flow. Fatigue – S-N curves – Fatigue behaviours of CMCs – Fatigue of particle and whisker reinforced composites – Hybrid composites – Thermal fatigue – Creep.					
TOTAL : 45 PERIODS					
OUTCOMES:	On completion of this course, students will be able to				
1.	Analyse the fibre reinforced Laminate for optimum design.				
2.	Explore the concepts of Polymer Matrix Composites.				
3.	Discuss different Metal Matrix Composites properties and manufacturing process.				

4.	Understand the different Ceramic Matrix Composites properties.
5.	Apply Fatigue and creep theory to study and analyse the Mechanical behaviour of Composites.

18MOE009	INDUSTRIAL REFRIGERATION AND AIR CONDITIONING				L	T	P	C
		3	0	0	3			
OBJECTIVES:								
•	To make the students to understand vapour compression and vapour absorption system Operation.							
•	To analyse the refrigeration cycles and methods for improving Performance.							
•	To acquire the knowledge on components of refrigeration systems.							
•	To design air conditioning systems using cooling load calculations.							
•	To explore the application of refrigeration and air conditioning systems.							
UNIT I	INTRODUCTION							9
Introduction to Refrigeration and Air conditioning and its Practical applications - Unit of Refrigeration and C.O.P.– Ideal cycles- Refrigerants Desirable properties – Classification - Nomenclature - ODP & GWP.								
UNIT II	VAPOUR COMPRESSION REFRIGERATION SYSTEM							9
Vapour compression cycle: p-h and T-s diagrams - deviations from theoretical cycle – sub cooling and super heating- effects of condenser and evaporator pressure on COP- multi pressure system – low temperature refrigeration - Cascade systems – problems. Equipments: Type of Compressors, Condensers, Expansion devices, Evaporators.								
UNIT III	OTHER REFRIGERATION SYSTEMS							9
Working principles of Vapour absorption systems and adsorption cooling systems – Steam jet refrigeration- Ejector refrigeration systems- Thermoelectric refrigeration- Air refrigeration - Magnetic -Vortex and Pulse tube refrigeration systems.								
UNIT IV	PSYCHOMETRIC PROPERTIES AND PROCESSES							9
Properties of moist Air-Gibbs Dalton law, Specific humidity, Dew point temperature, Degree of saturation, Relative humidity, Enthalpy, Humid specific heat, Wet bulb temperature, Thermodynamic wet bulb temperature, Psychrometric chart, Psychrometric of air-conditioning processes, mixing of airstreams.								
UNIT V	AIR CONDITIONING SYSTEMS AND LOAD ESTIMATION							9
Air conditioning loads- Outside and inside design conditions- Heat transfer through structure- Solar Radiation- Electrical appliances- Infiltration and ventilation- internal heat load-Apparatus selection-fresh air load-Human comfort & IAQ principles- effective temperature & chart-calculation of summer &winter air conditioning load- Classifications- Layout of plants- Air distribution system- Filters- Air-conditioning Systems with Controls- Temperature, Pressure and Humidity sensors, Actuators &Safety controls.								
							TOTAL : 45 PERIODS	

OUTCOMES: On completion of this course, students will be able to	
1.	Analyse different refrigeration systems, air conditioning systems and refrigerants.
2.	Understand the applications of refrigeration and air conditioning systems.
3.	Learn the components and working of refrigeration and air conditioning systems
4.	Evaluate different psychometric properties and processes.
5.	Perform heating and cooling load calculations.
